- Internal Medicine Clinic

SPECIALIZED SURGERIES

Jam Hospital performs highly specialized surgical procedures that are rare even among Iranian and international healthcare institutions, with some procedures offered exclusively at our facility.

Examples of our specialized surgical services include:

1. Breast Cancer Surgery:

Surgical removal of breast tumors with axillary lymph node dissection (mastectomy procedures).

2. HIPEC Surgery:

A two-stage procedure involving cytoreductive surgery to remove abdominal tumors, followed by Hyperthermic Intraperitoneal Chemotherapy (HIPEC).

3. Total Knee Replacement:

Surgical replacement of damaged knee joints with prosthetic implants for patients with severe knee disorders.

4. CABG (Coronary Artery Bypass Grafting):

A procedure that restores blood flow to the heart by bypassing blocked coronary arteries using the patient's own blood vessels.

5. Total Hip Replacement: Surgical removal and replacement of a damaged hip joint (femoral head) with a prosthetic implant.

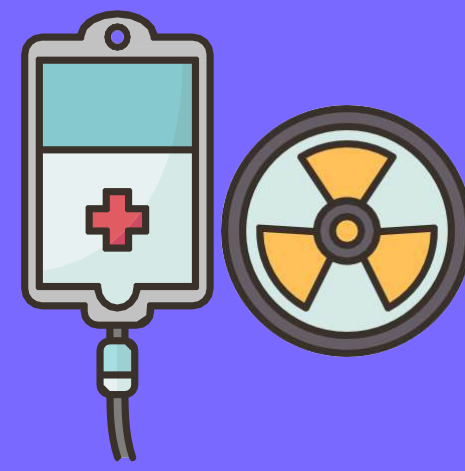

6. Pancreaticoduodenectomy (Whipple Procedure): A complex surgical procedure performed to remove tumors located in the head of the pancreas.

7. Nephrectomy: Surgical removal of a kidney, typically performed to treat kidney cancer, severe infection, or other serious kidney diseases.

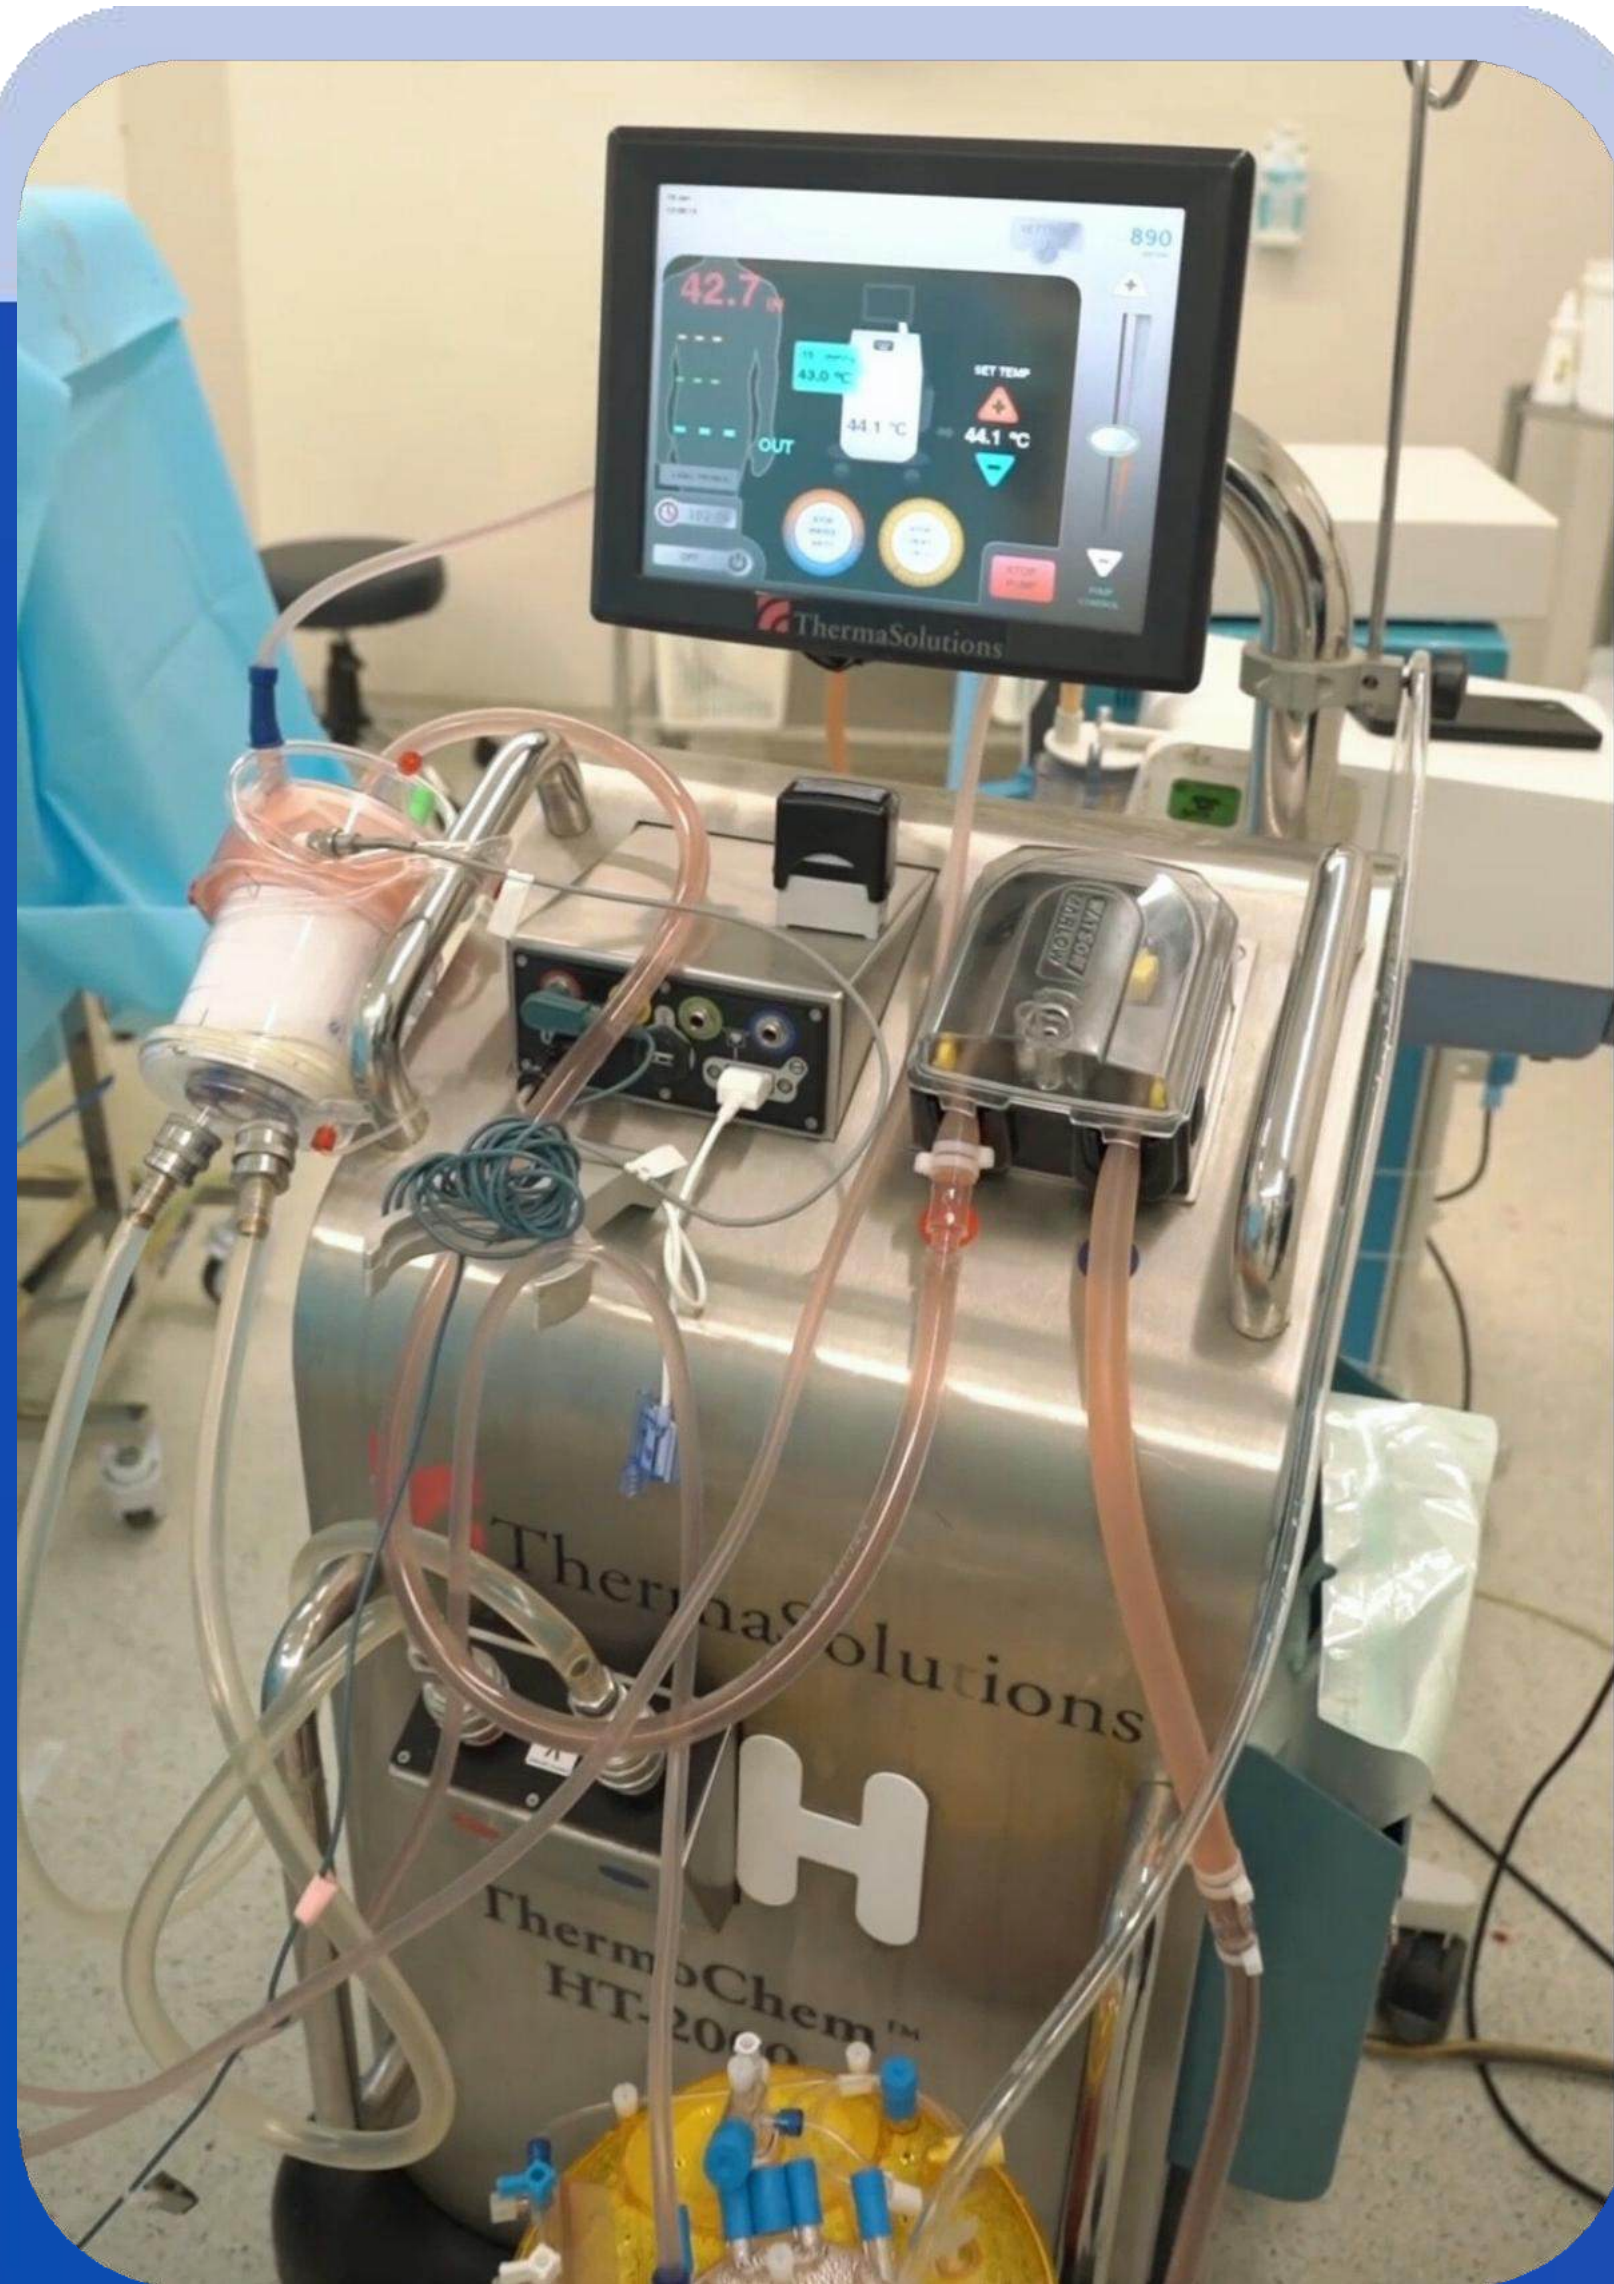

8. Endometriosis Surgery: Excision of endometrial tissue located outside the uterus to relieve pain and abnormal bleeding.

9. Craniotomy: A surgical procedure involving the opening of the skull to remove brain tumors, evacuate blood clots, or treat other neurological conditions.

10. Laminectomy: A spinal decompression procedure performed by removing part of the vertebral bone (lamina) to relieve pressure on the spinal nerves.

HIPEC SURGERY

In 2015, Jam Hospital, under the leadership of experienced and renowned surgical team led by Dr. Mehrdad Bohlooli, performed Iran's first HIPEC surgery. In 2017, Dr. Bohlooli also conducted the Middle East's first PIPEC procedure at Jam hospital.

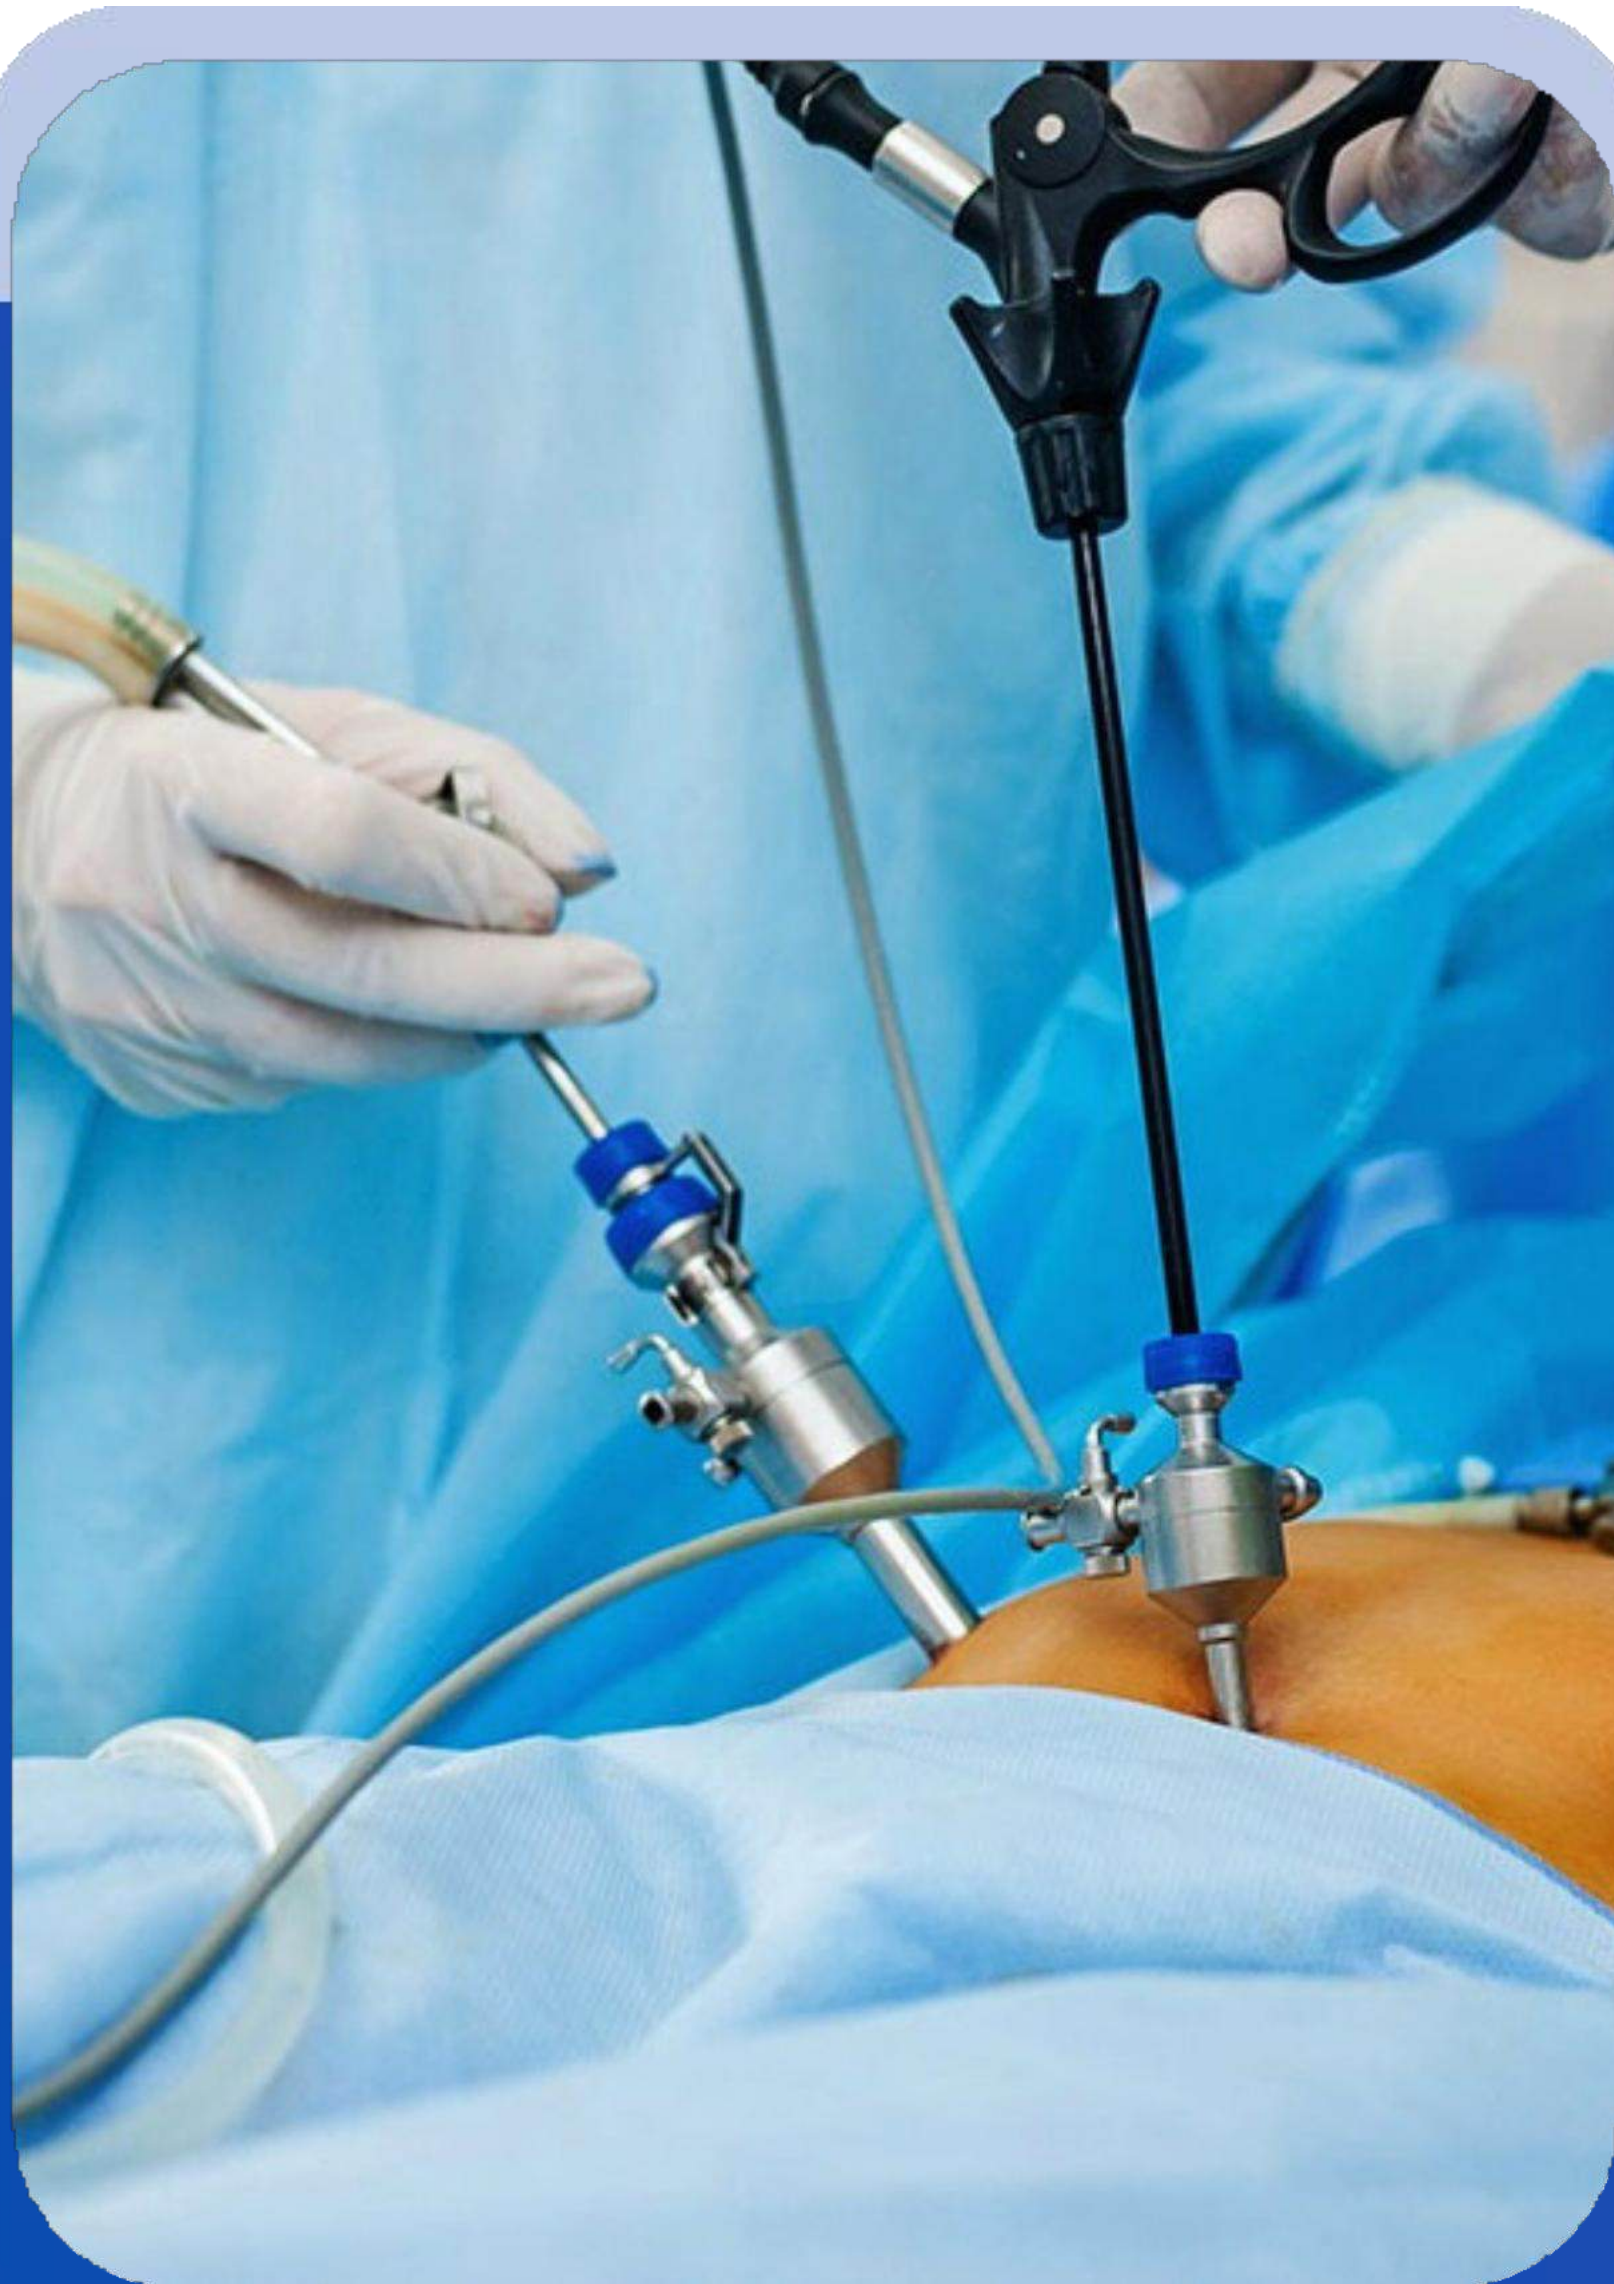

Today, Jam Hospital is Recognized as one of the leading centers for HIPEC-based cancer treatment, performing these procedures on a daily basis. Between 2015 and 2024, the hospital successfully performed more than 3,000 HIPEC surgeries.

HIPEC surgery can significantly improve the survival of cancer patients and, in some cases, may lead to complete disease control.

During the procedure, all visible tumors are removed from the abdominal cavity. A heated chemotherapy solution is then circulated throughout the abdomen using a specialized HIPEC system for 90 to 120 minutes to destroy any remaining microscopic cancer cells that are not visible to the naked eye.

GASTROINTESTINAL SURGERY

Regain your health and vitality with the advanced Gastrointestinal Surgery Department at Jam Hospital.

Our team of renowned surgeons specializes in minimally invasive and robotic procedures to promote faster recovery and reduce discomfort. Our team of renowned surgeons specializes in minimally invasive and robotic procedures to promote faster recovery and reduce discomfort.

Pioneering Techniques

State-of-the-art technology for precision and safety, including:

- **Laparoscopic Surgery:** For gallstones, hernia repair, and appendicitis.
- **Weight Loss (Bariatric) Surgery:** Gastric sleeve and bypass procedures.
- **Cancer Surgery:** Expert treatment for cancers of the stomach, colon, and liver Pancreas.
- **Reflux & Esophageal Surgery:** To restore your comfort and quality of life.

Why international patients trust us:

- **Pioneering Techniques** State-of-the-art technology for precision and safety.

COSMETIC SURGERY

Welcome to Jam Hospital's Cosmetic Surgery Department, where your vision of beauty becomes our blueprint for transformation.

We offer a comprehensive suite of cosmetic procedures performed by internationally-trained surgeons. Our expertise includes:

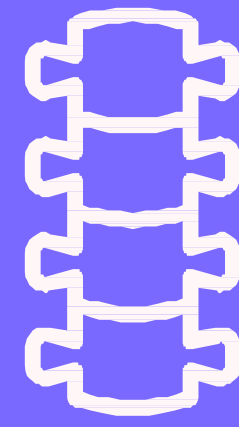

Facial Harmony: Rhinoplasty, Eyelid Surgery, and Facelifts.

Body Contouring: Liposuction, Tummy Tucks, and Breast Augmentation.

Skin Rejuvenation: Advanced laser treatments and skincare.

Your comfort and safety are our priority. Our modern facility is equipped with the latest technology, ensuring you receive world-class care in a private and supportive environment. We provide personalized all-inclusive packages designed for international patients, covering everything from consultation to recovery.

Take the first step toward a more confident you.

ORTHOPEDIC SURGERY

Restore Your Movement. Reclaim Your Life. Rediscover your strength with the expert Orthopedic Surgery team at Jam Hospital.

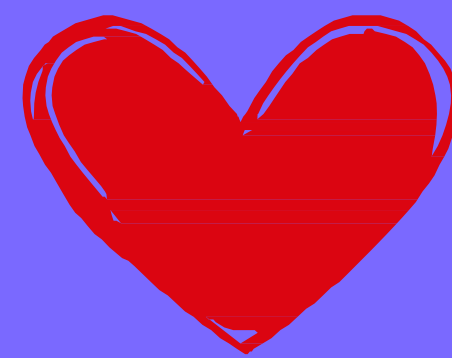

We are dedicated to repairing injuries, relieving pain, and restoring your mobility through the latest surgical techniques. Our specialists provide comprehensive care for:

Joint Replacement: Advanced hip, knee, and shoulder replacement surgery to improve mobility and relieve pain.

Sports Injuries: Arthroscopic surgery for ACL, meniscus, and rotator cuff injuries.

Spine Surgery: Treatment for herniated discs, spinal stenosis, and chronic back pain.

Fracture Care: Comprehensive management of complex fractures and traumatic injuries to support a full recovery.

CATH LAB (HEART CATHETERISM)

Angiography is the most important and accurate diagnostic procedure for detecting coronary artery disease (disease of the heart's blood vessels).

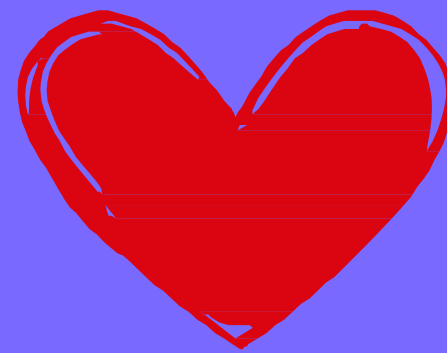

Coronary angiography provides detailed information about the structure of the coronary arteries, enabling cardiologists to make accurate treatment decisions.

Jam Hospital's Cath Lab opened in Mehr 1388 (September 2000), equivalent to September 2009, equipped with a Siemens angiography system

with many capabilities in cardiovascular problems diagnosis.

The device has some features such as peripheral vascular angiography and also tumor embolization. In this medical center, the balloon pump therapy is used for patients with cardiogenic shock. Interventional procedures (valvuloplasty, PDA, PFO, ASD, VSD EPS, Ablation, ESD, PPM and other cardiac diagnostic and therapeutic services are available.

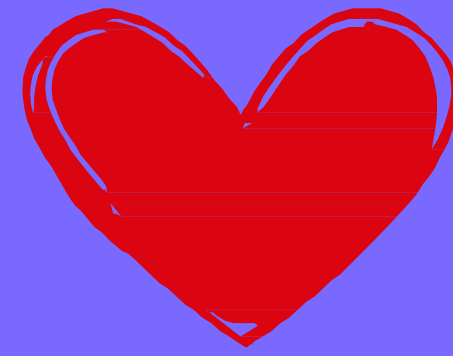

This center is equipped with a separate recovery unit featuring patient monitoring, infusion pumps, and emergency support services, including rapid transfer to the CCU when required

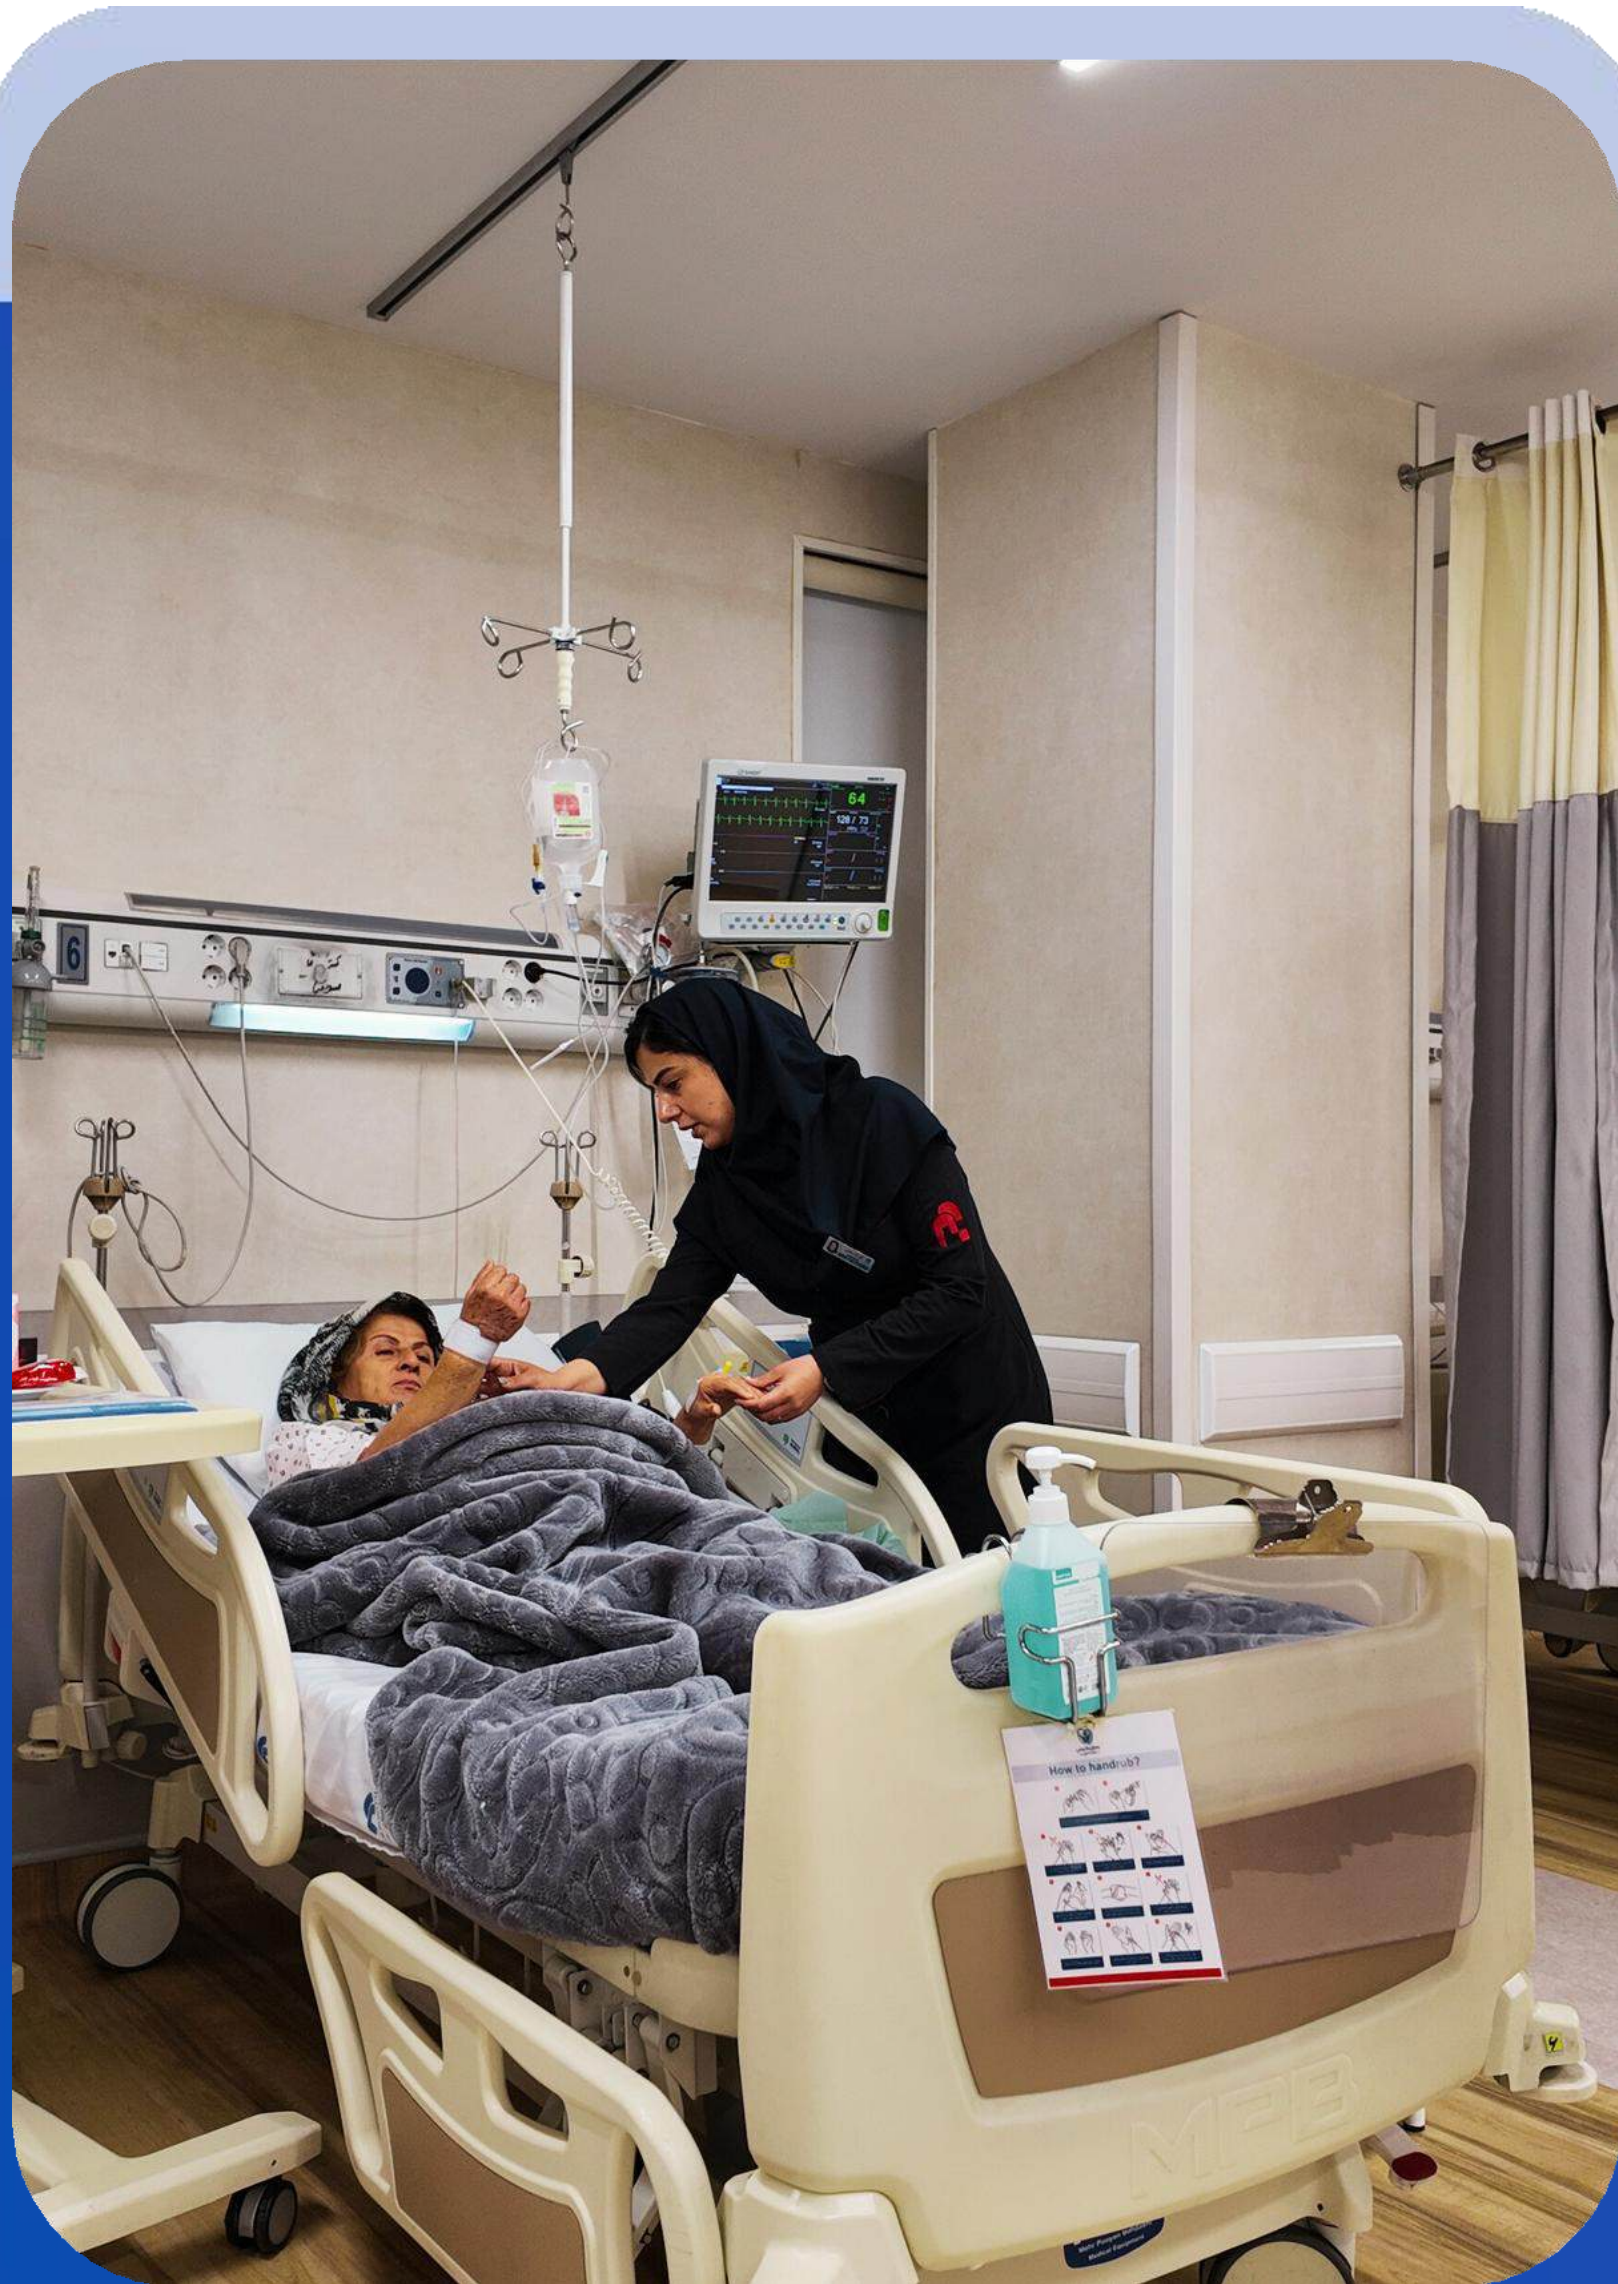

HEART DIAGNOSIS & PROCEDURES

1. Specialized Echocardiography including Tissue Doppler, TEE and Stress Echocardiography.
2. Angioplasty Procedures including:
 - Coronary angioplasty and peripheral artery stenting
 - EVAR
 - Valvuloplasty
 - Carotid Artery Stenting (CAS)
 - TAVI
3. Electrophysiology Procedures, including:
 - EPS and ablation for the diagnosis and treatment of ventricular and supraventricular arrhythmias
 - Pacemaker, ICD, and CRT-D implantation
4. Invasive Radiology Procedures, including:
 - Tumor Embolization
 - Invasive radiology, PTBD, Celiac, Biliary Balloon, Biliary Stenting, Mesenteric Angiography, Celiac Angiography, Nephrostomy, Renal Biopsy, Calystomy
 - Pyelography, Renal Color Doppler Ultrasound, TACE
 - Liver Mass Biopsy, Liver Biopsy, Abscess Drainage
 - Aspiration, Cholangiography

CCU

Cardiac Care Unit Jam Hospital has 10 patient beds, one isolation bed and one special procedure bed, all equipped with modern medical equipment.

This unit receives patients from emergency and other units; in certain cases, patients are moved to this unit after angiography or open heart surgery in operating rooms.

Jam's CCU is located on the fourth floor, and all its beds are equipped with advanced bedside monitors, central oxygen, central suction, nurse call system and also central monitoring at the nursing station for continuous patient monitoring.

All patients in CCU are controlled by the resident cardiologist, If necessary, patients can be monitored remotely through a telemonitoring system. (portable patient monitoring). By cardiologist's discretion, the patient's care can be continued in POST CCU unit, after their condition has stabilized

ICU

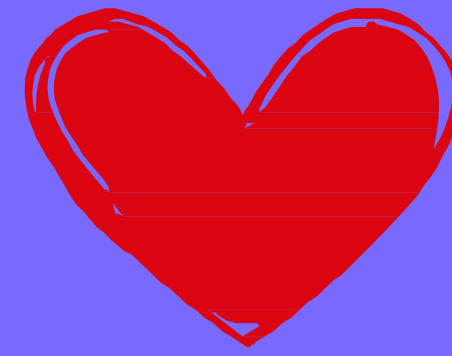

The Intensive Care Unit (ICU) at Jam Hospital is on the first floor adjacent to the operating rooms and the Open Heart ICU. The unit consists of 12 beds and one isolated room in a separated area.

All beds are of the three-crank type with position adjustability for long-term hospitalization. Beds are equipped with full monitoring of vital signs, a central monitoring system for continuous monitoring at the nurses' station and respiratory devices (ventilators) with adjustable respiratory modes.

Patients are admitted to this unit from Emergency Department, the operating room (for postoperative care), and inpatient care units, if intensive care is needed.

Daily patient visits (twice a day) are provided by the resident ICU physician and the attending physician. At this clinic, a resident anesthesiologist is in attendance at patients' beds 24 hours a day.

Managing critically ill patients is an essential function of the Intensive Care Unit. This concern is properly managed with proficient physicians, trained and experienced nursing staff, and provision of necessary medical facilities, making Jam Hospital one of the leading hospitals with a high ICU bed occupancy rate in the ICU due to frequent requests and proper patient care.

ICU-OH

The Open Heart ICU (ICU-OH) is located on the first floor adjacent to the General ICU and the operating rooms, The unit has five inpatient beds and a particular operation and modern equipment and specially trained nursing staff.

All beds have monitors and ventilators advanced modern monitors , suction, infusion pumps and blood warmers all beds with central monitoring and recording vital signs checked by nurse station and All beds are connected to a central monitoring system. Heart surgery patients are monitored daily by resident physicians and cardiologists to ensure coordinated, high-quality postoperative care.

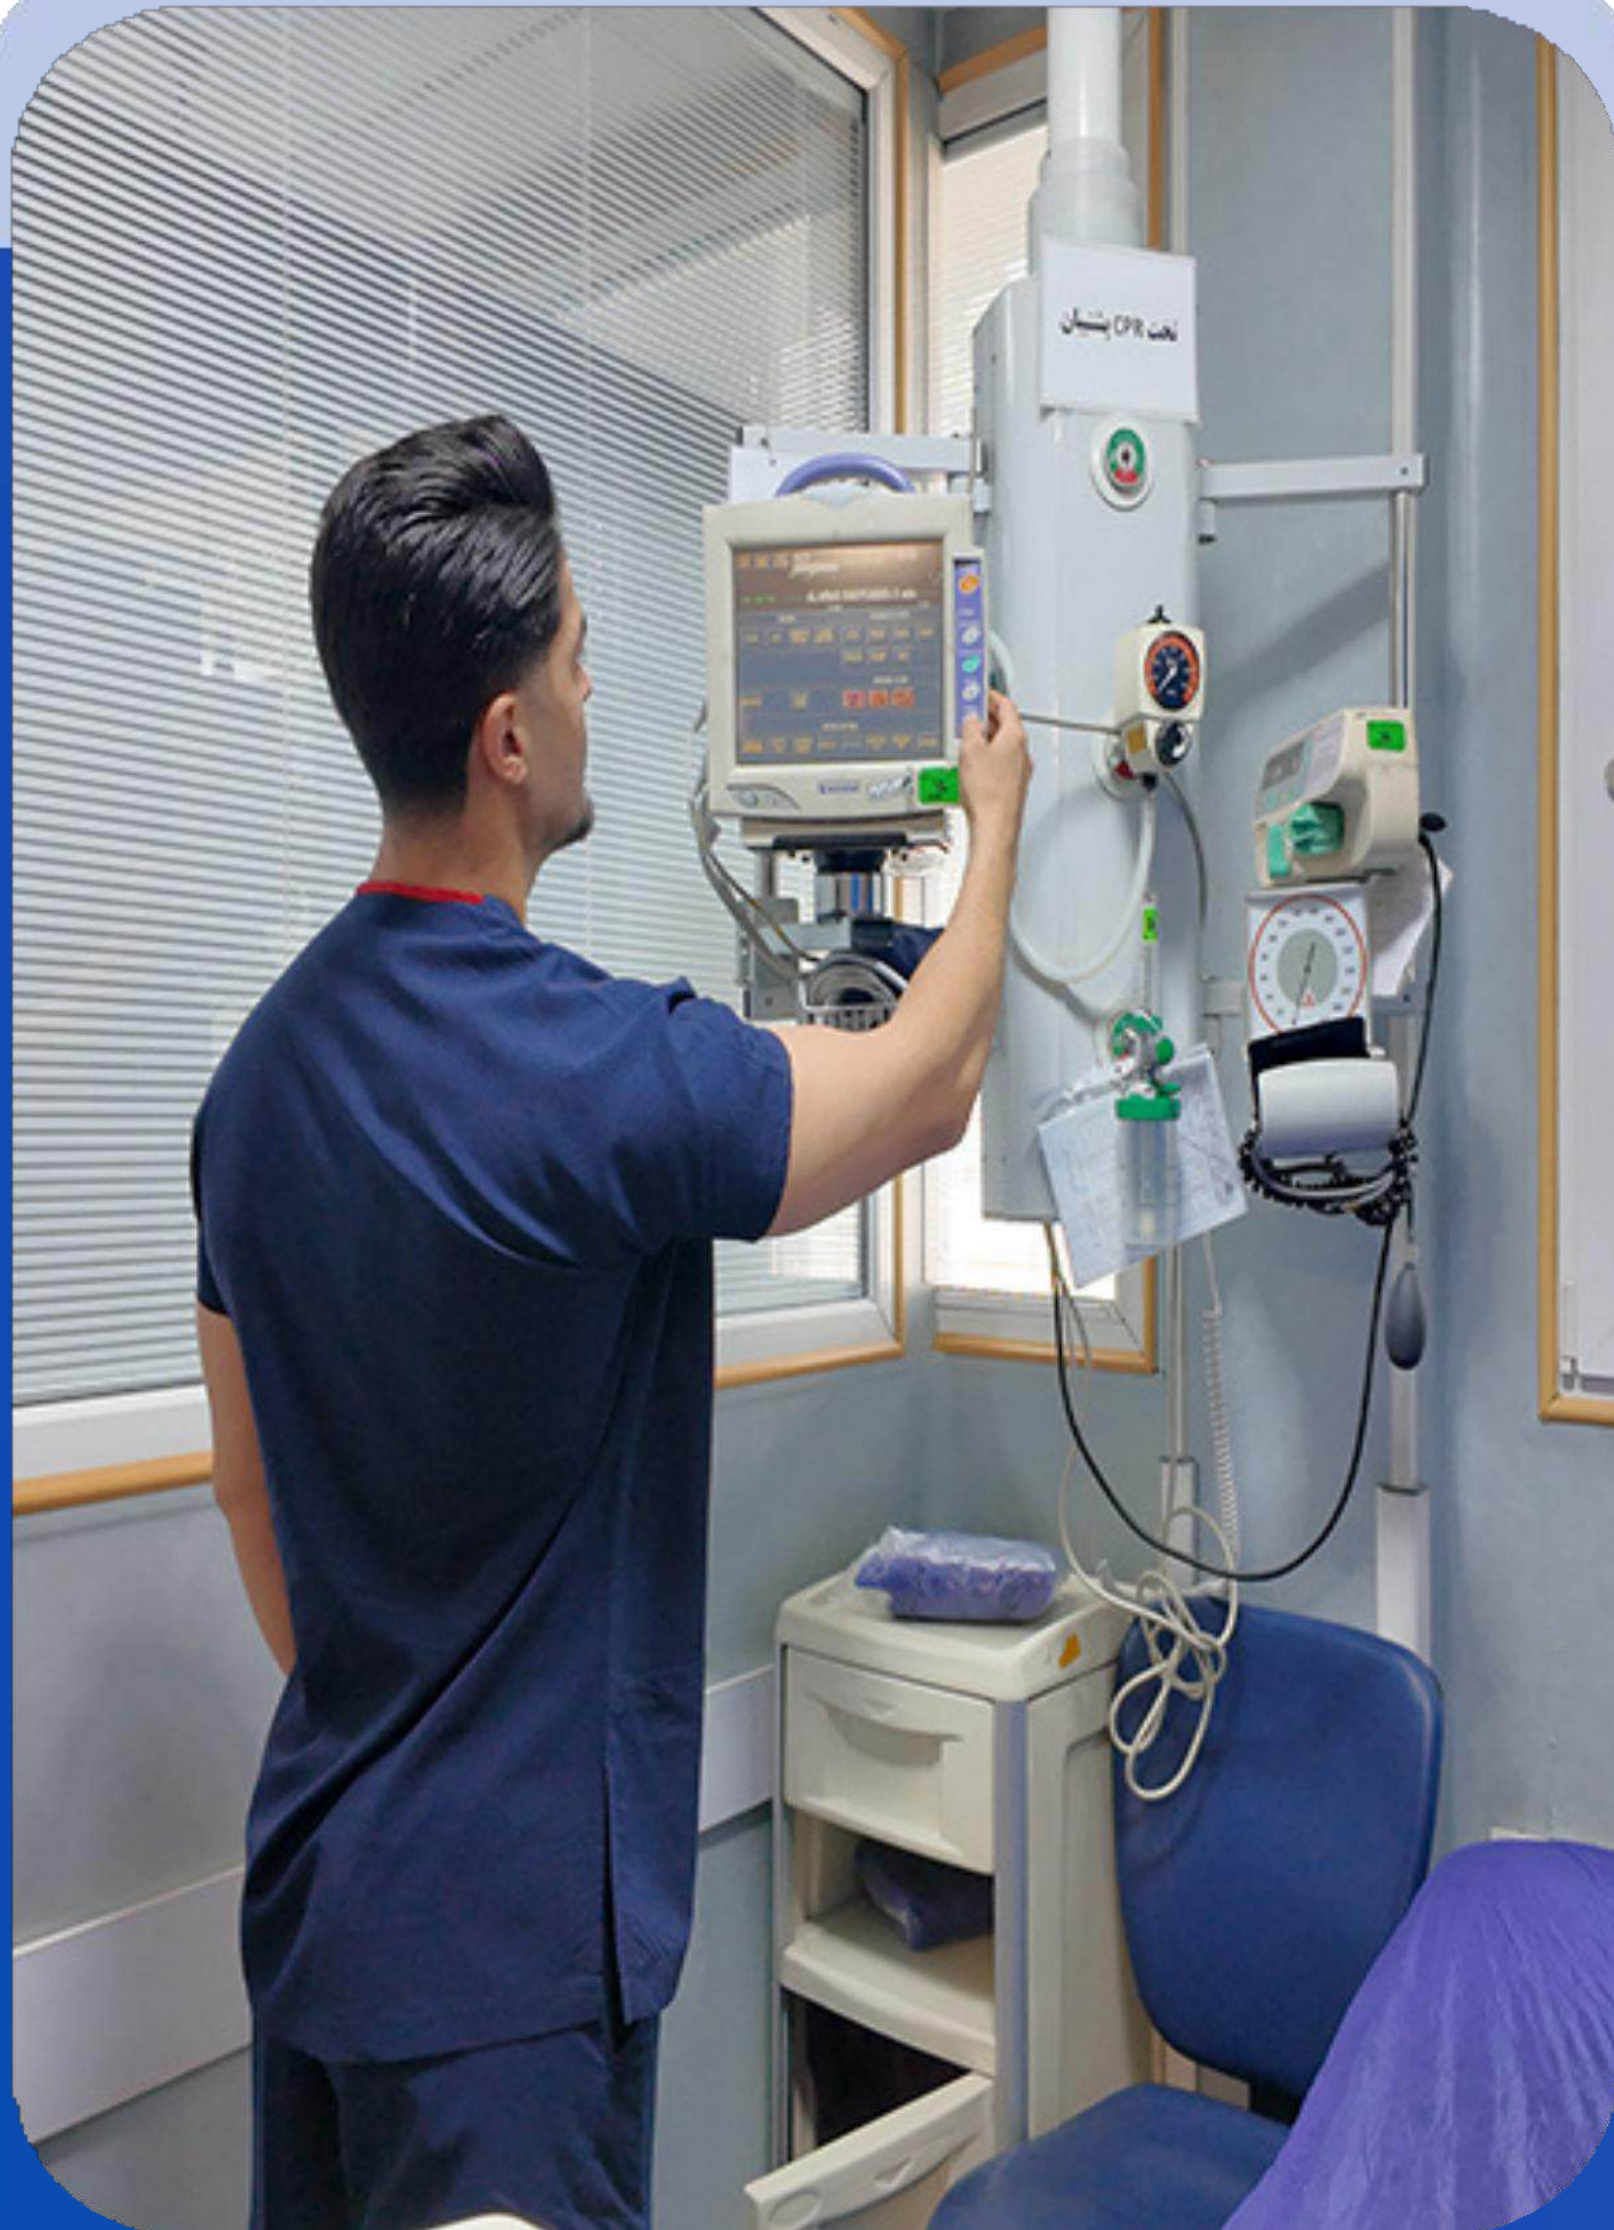

EMERGENCY WARD

The Emergency Department is one of the hospital's most important clinical units. Patients admitted to this department often require urgent or critical medical care . Every second counts in providing timely treatment. Jam Hospital's Emergency Department was renovated in 1390 (2011), meeting the Ministry of Health and Education's standards. This complex utilizes advanced and up to date equipment and experienced healthcare professionals. This Emergency features a separate triage room, six fully equipped beds, a CCU bed, a bed specified for children, a CPR room, a public treatment room and a minor operating room, a splinting room, an injections room, an isolation and treatment room and a special drug storage.

EMERGENCY WARD

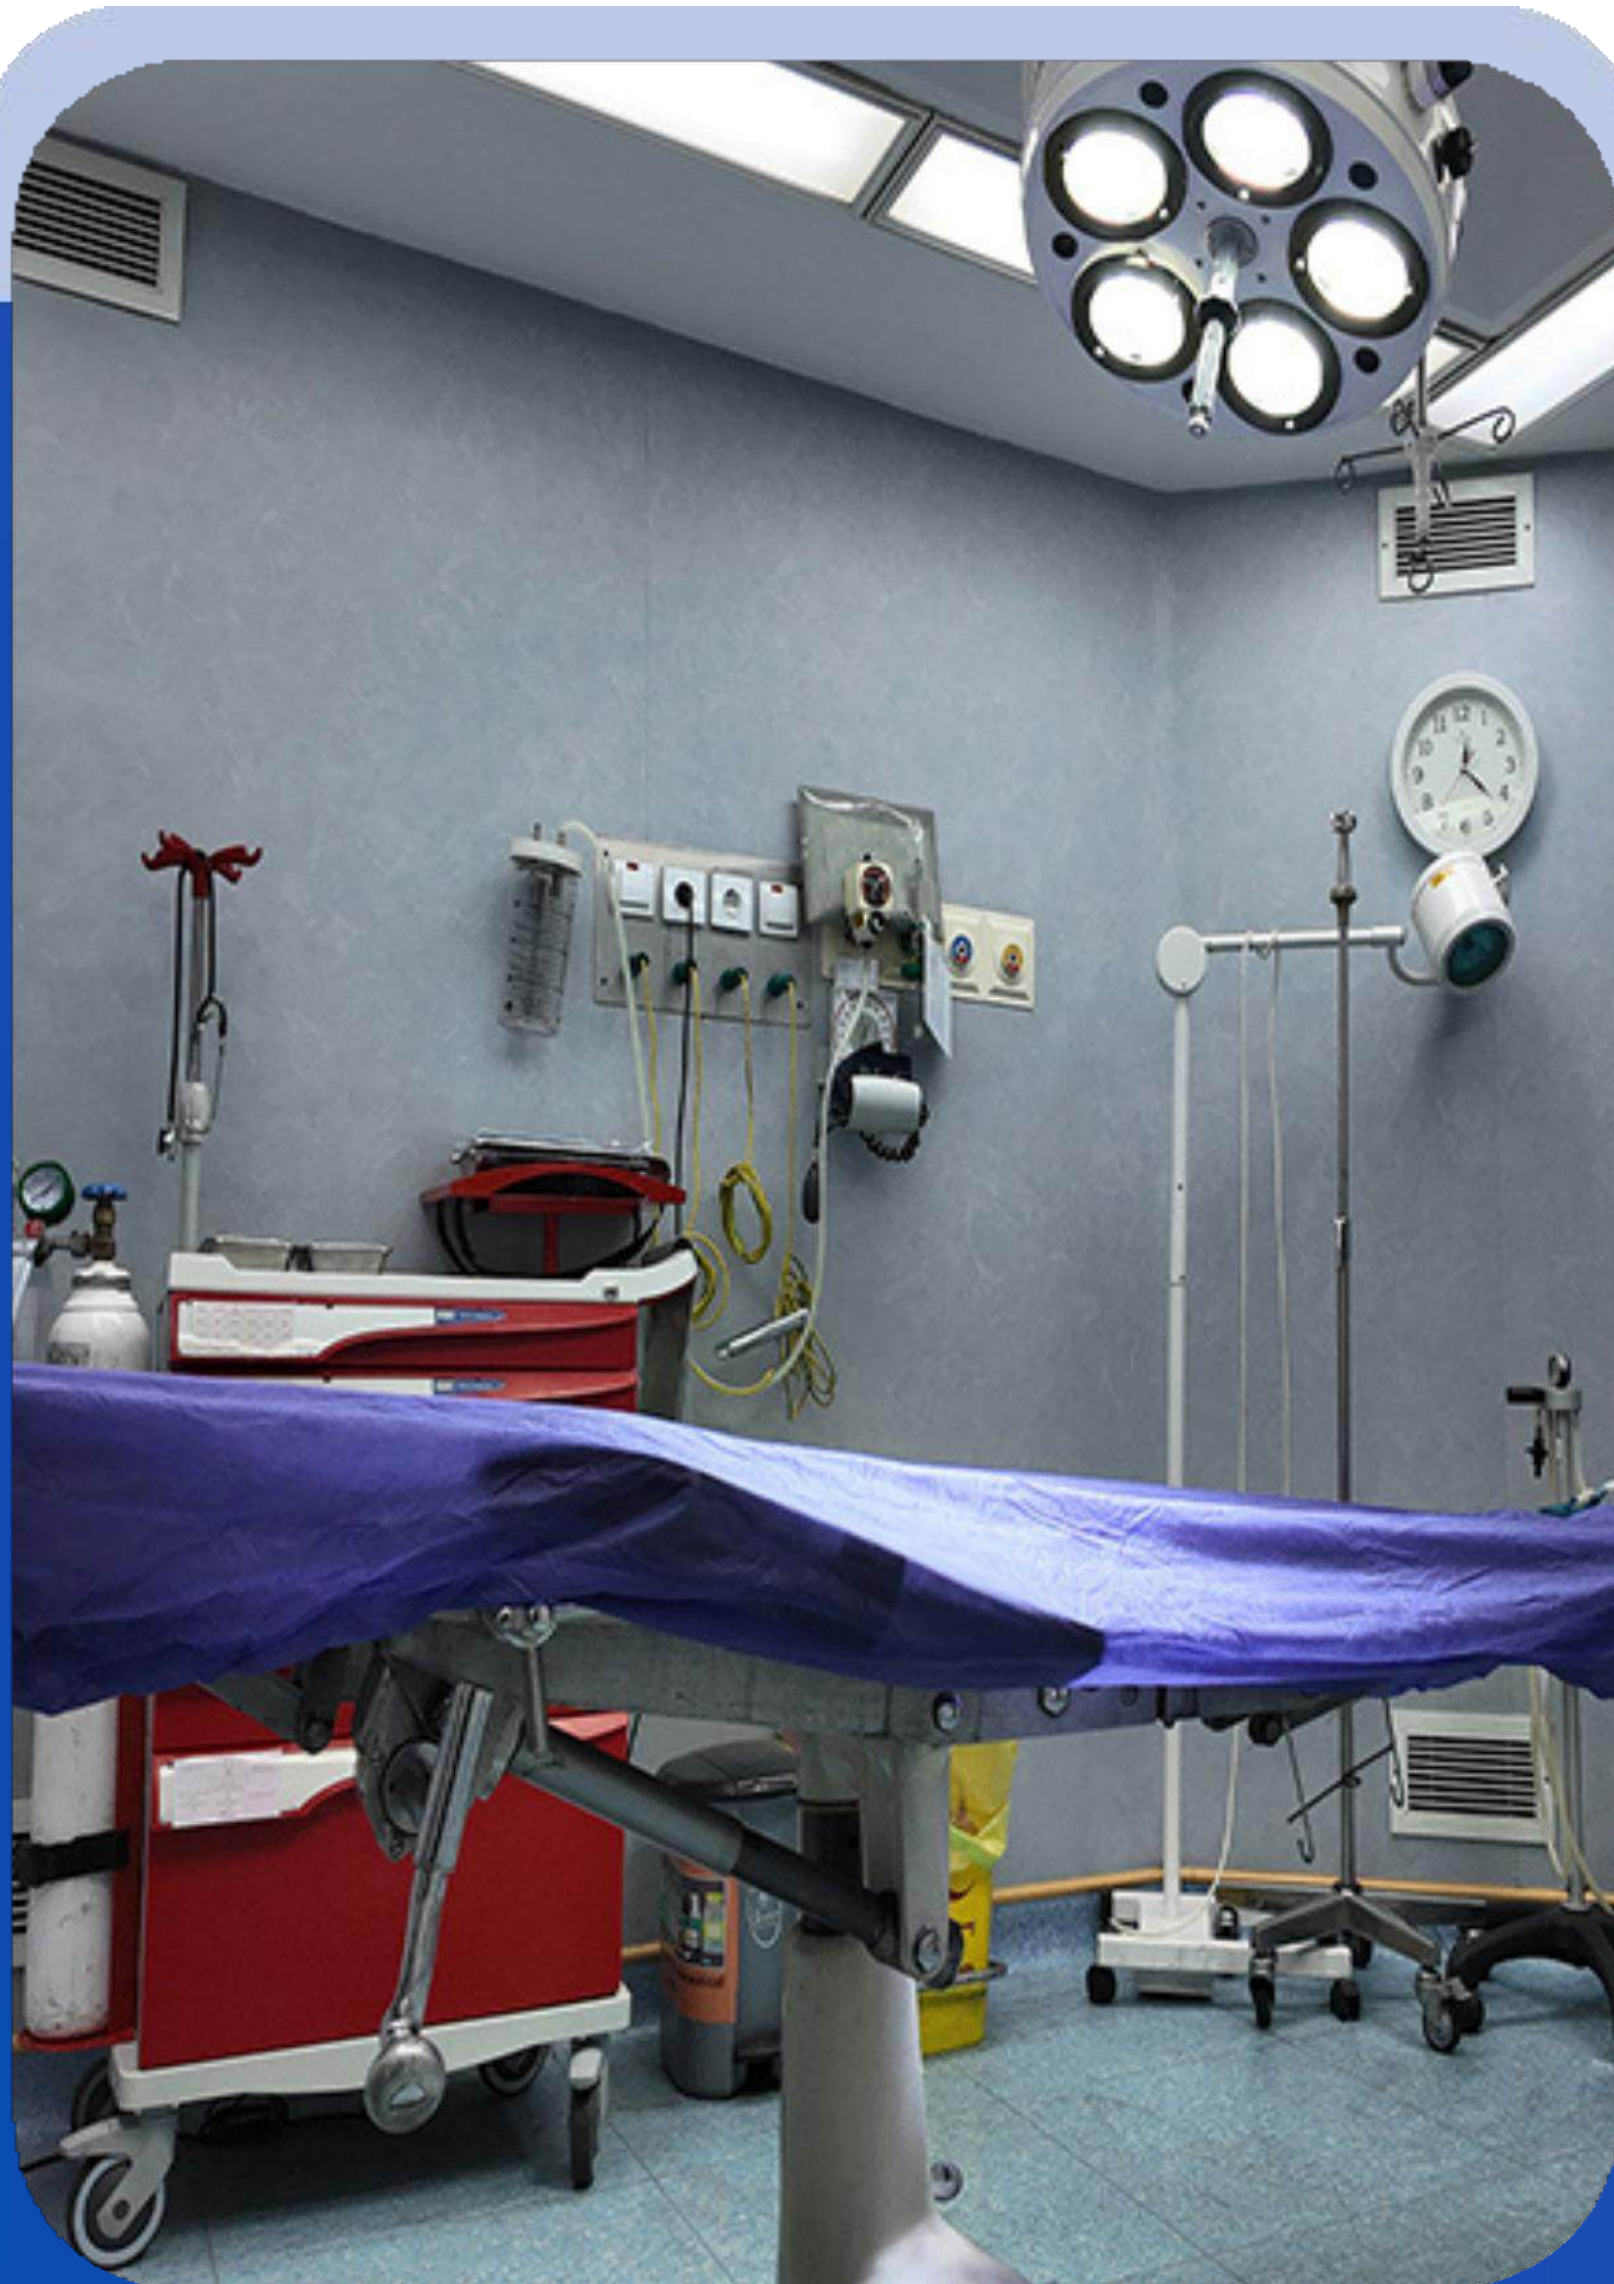

All beds provide blood-pressure, heartbeat, breath count, blood oxygen saturation and E.C.G monitoring. the workflow meet the standards of the respective ministry so that all parts have the needed maneuverability. While designing the Emergency, it has been kept in mind to take the best advantage of the space, and that In Jam hospital's CPR room, all the equipment needed for BLS and ACLS operations are provided for.

Portable suction (alongside the central suction), portable ventilator, DC Shock and heart monitoring, equipments needed for using provisional PACE MARKER, CVP LINE, and advanced laryngoscopy machines for intubation in case of difficult intubations are also available.

EMERGENCY WARD

All of the patients entering the Emergency will go through prioritization by the triage nurse, and then will be visited by the 24-hour resident doctor and if they need special treatment, by the current recorded law they will be directed towards the respective specialist attending their treatment needs. In Jam hospital, the triage is done electronically. All the registering and request services are submitted and done via HIS, in order to reduce human-made mistakes.

OPERATING ROOM

The Operating Room Department provides specialized surgical services and advanced medical treatments. Jam Hospital has six operating rooms and eight fully monitored recovery beds . Over the years, the operating rooms have benefited from significant advances in surgical technology and techniques.

and These improvements support our skilled and committed physicians with modern facilities and equipment . Jam Hospital operating rooms In addition to conventional equipped with seven C-arm imaging systems, 2 Laparoscopy and Arthroscopy Radiofrequency (RF) treatment for varicose veins.

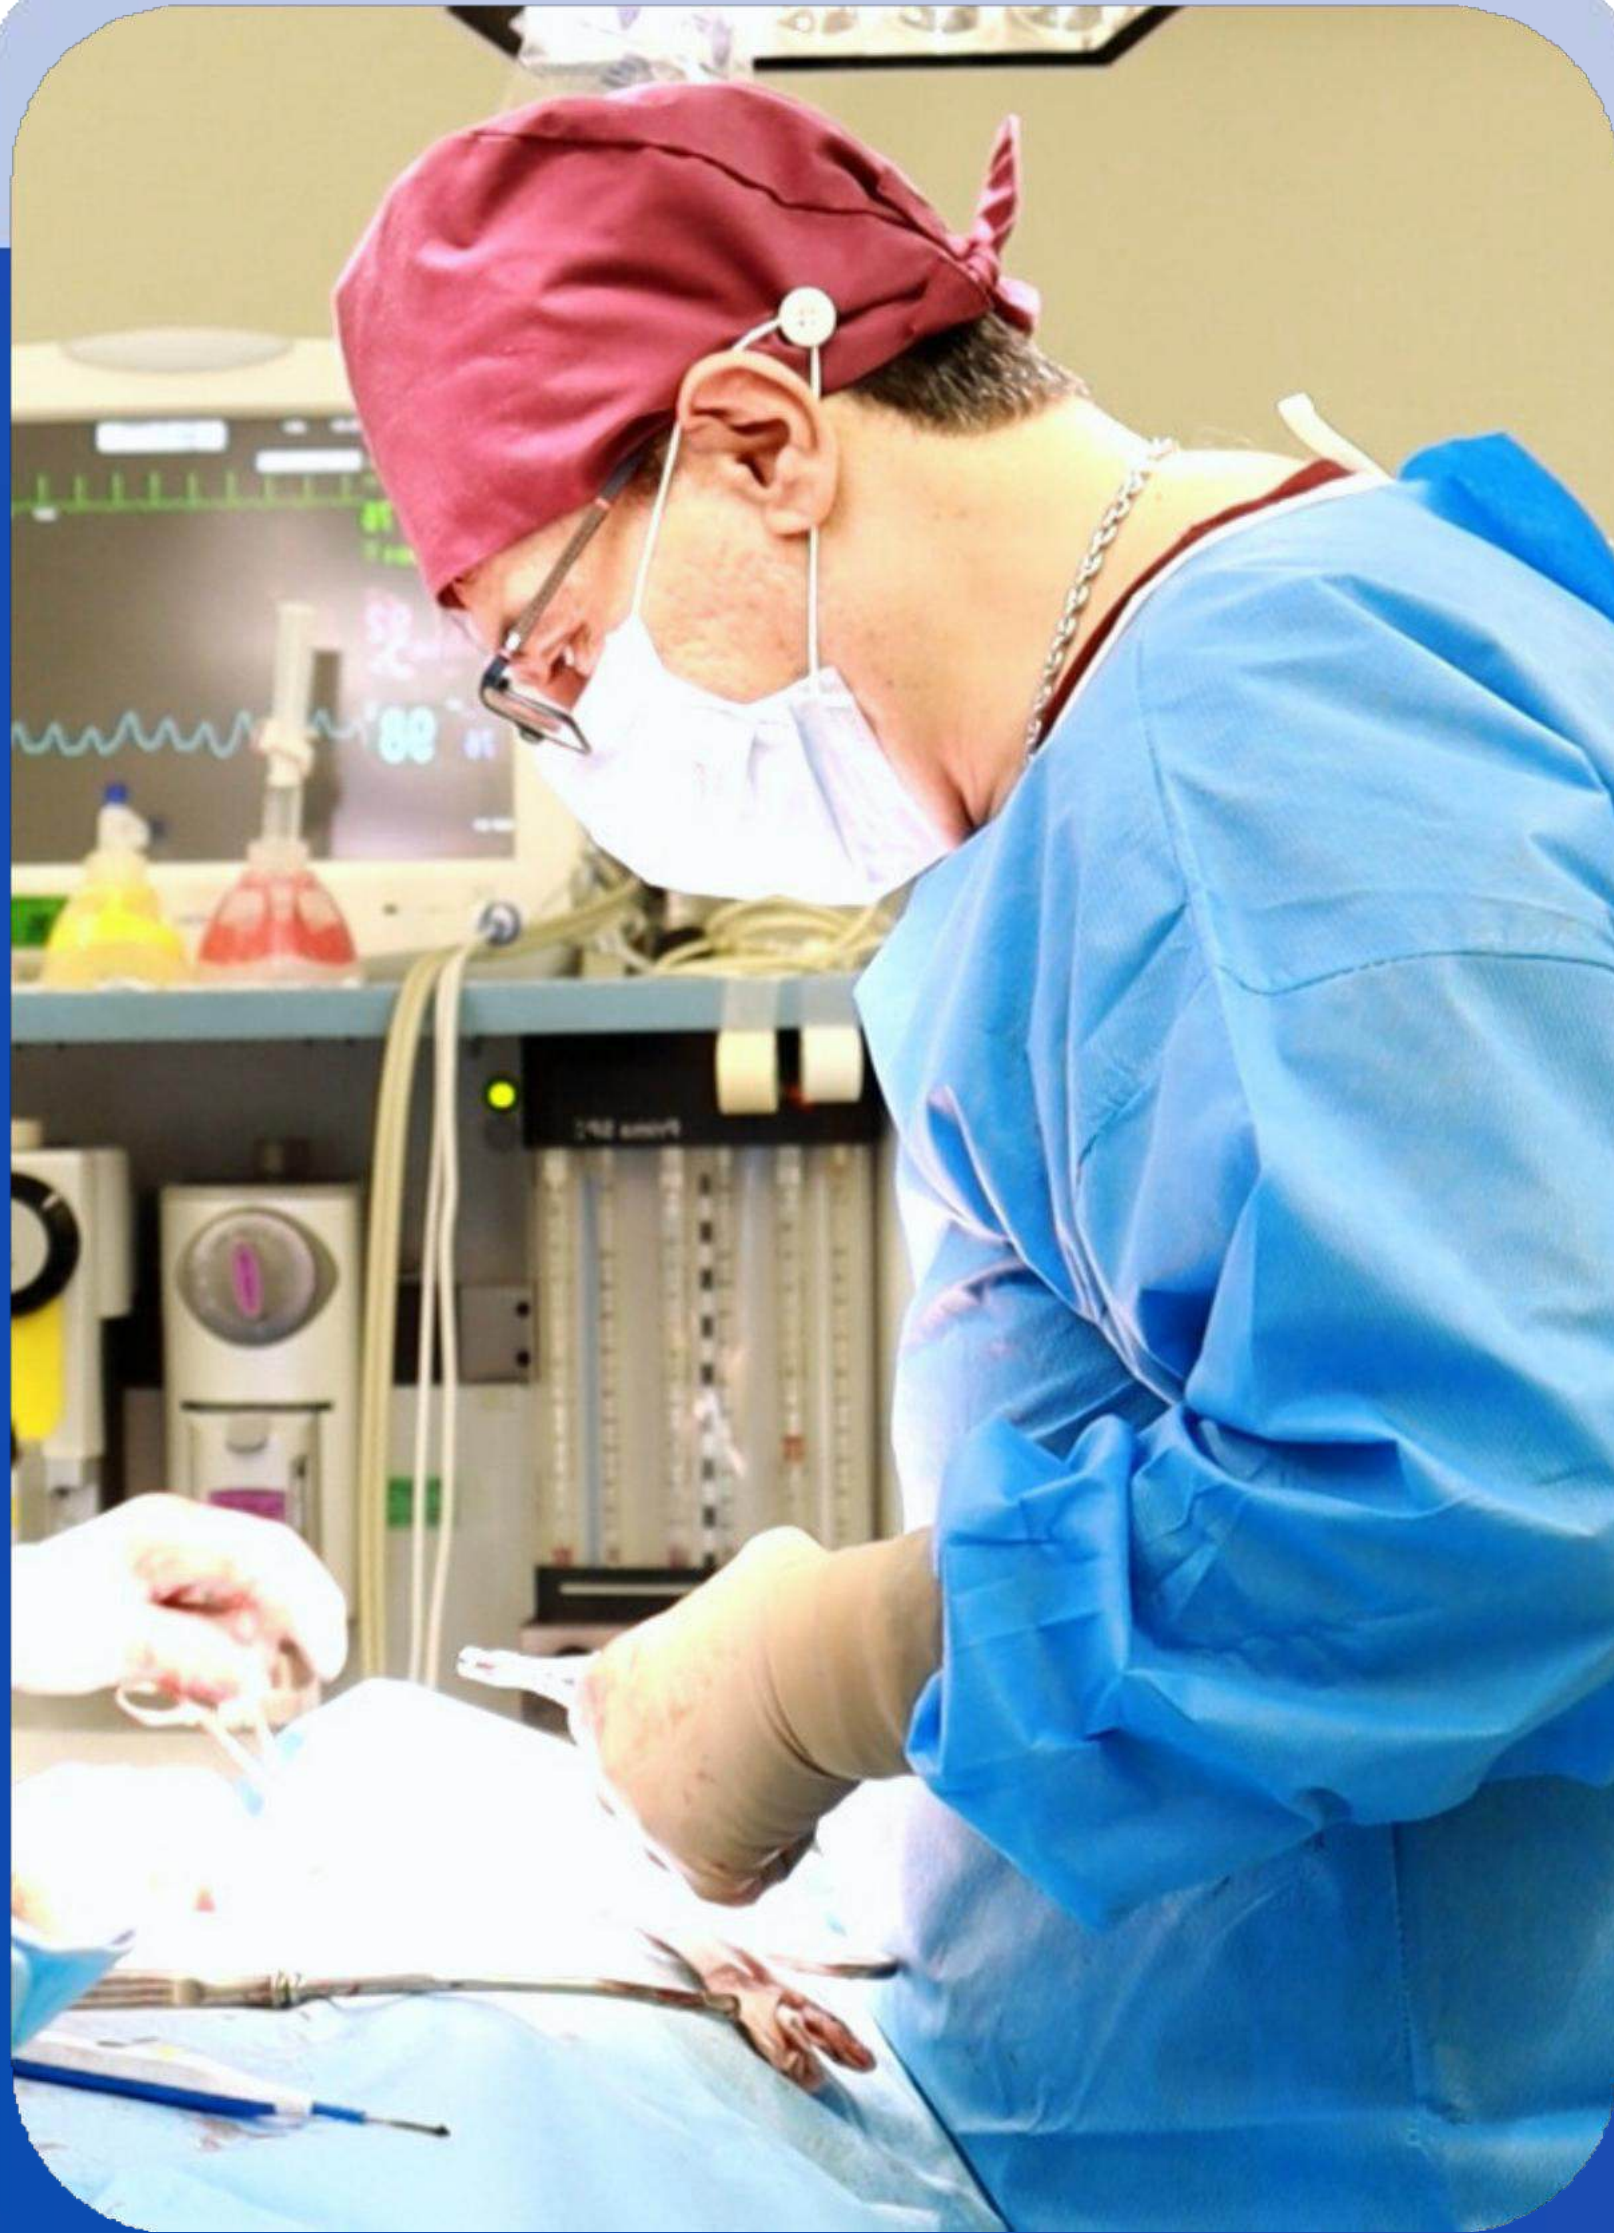

OPERATING ROOM

Liga Sure devices, morcellators for laparoscopic uterine removal , Detector system for A detection system for identifying lymph node involvement in cancer , Flat-panel operating tables , Complete patient monitoring and modern anesthesia equipment . In this collection of all surgical procedures including general surgery, neurosurgery (spinal surgery and endoscopy), maxillofacial surgery, orthopedic, open heart surgery (CABG and valve replacement and PDA,

OPERATING ROOM

VSD repair, laparoscopic gastric bypass, and gastric banding for the treatment of obesity, TUL (Transurethral Lithotripsy), TUR and kidney and ureter and subspecialty of thoracic and pulmonary surgery, arthroscopic surgery and joint knee and hip replacement surgery and Pcnl under fluoroscopy and Gynecological laparoscopic and endoscopic surgery and ENT procedures are also performed at this hospital.

OBSTETRICS AND PARTURITION AND PAINLESS PARTURITION

The Department of Obstetrics and Parturition at Jam Hospital includes various units dedicated to providing comprehensive prenatal care for pregnant women. The department is equipped with modern medical technology for the diagnosis and treatment of women's health conditions and outpatient treatment techniques and modern equipment to perform childbirth and obstetric procedures under the gynecologist has a wide range of services to provide customers and patients.

All prenatal screening tests , fetal health test(NST) and the testing of membrane rupture (AMNISURE)and various gynecological surgeries are done 24-hour with modern laparoscopies .

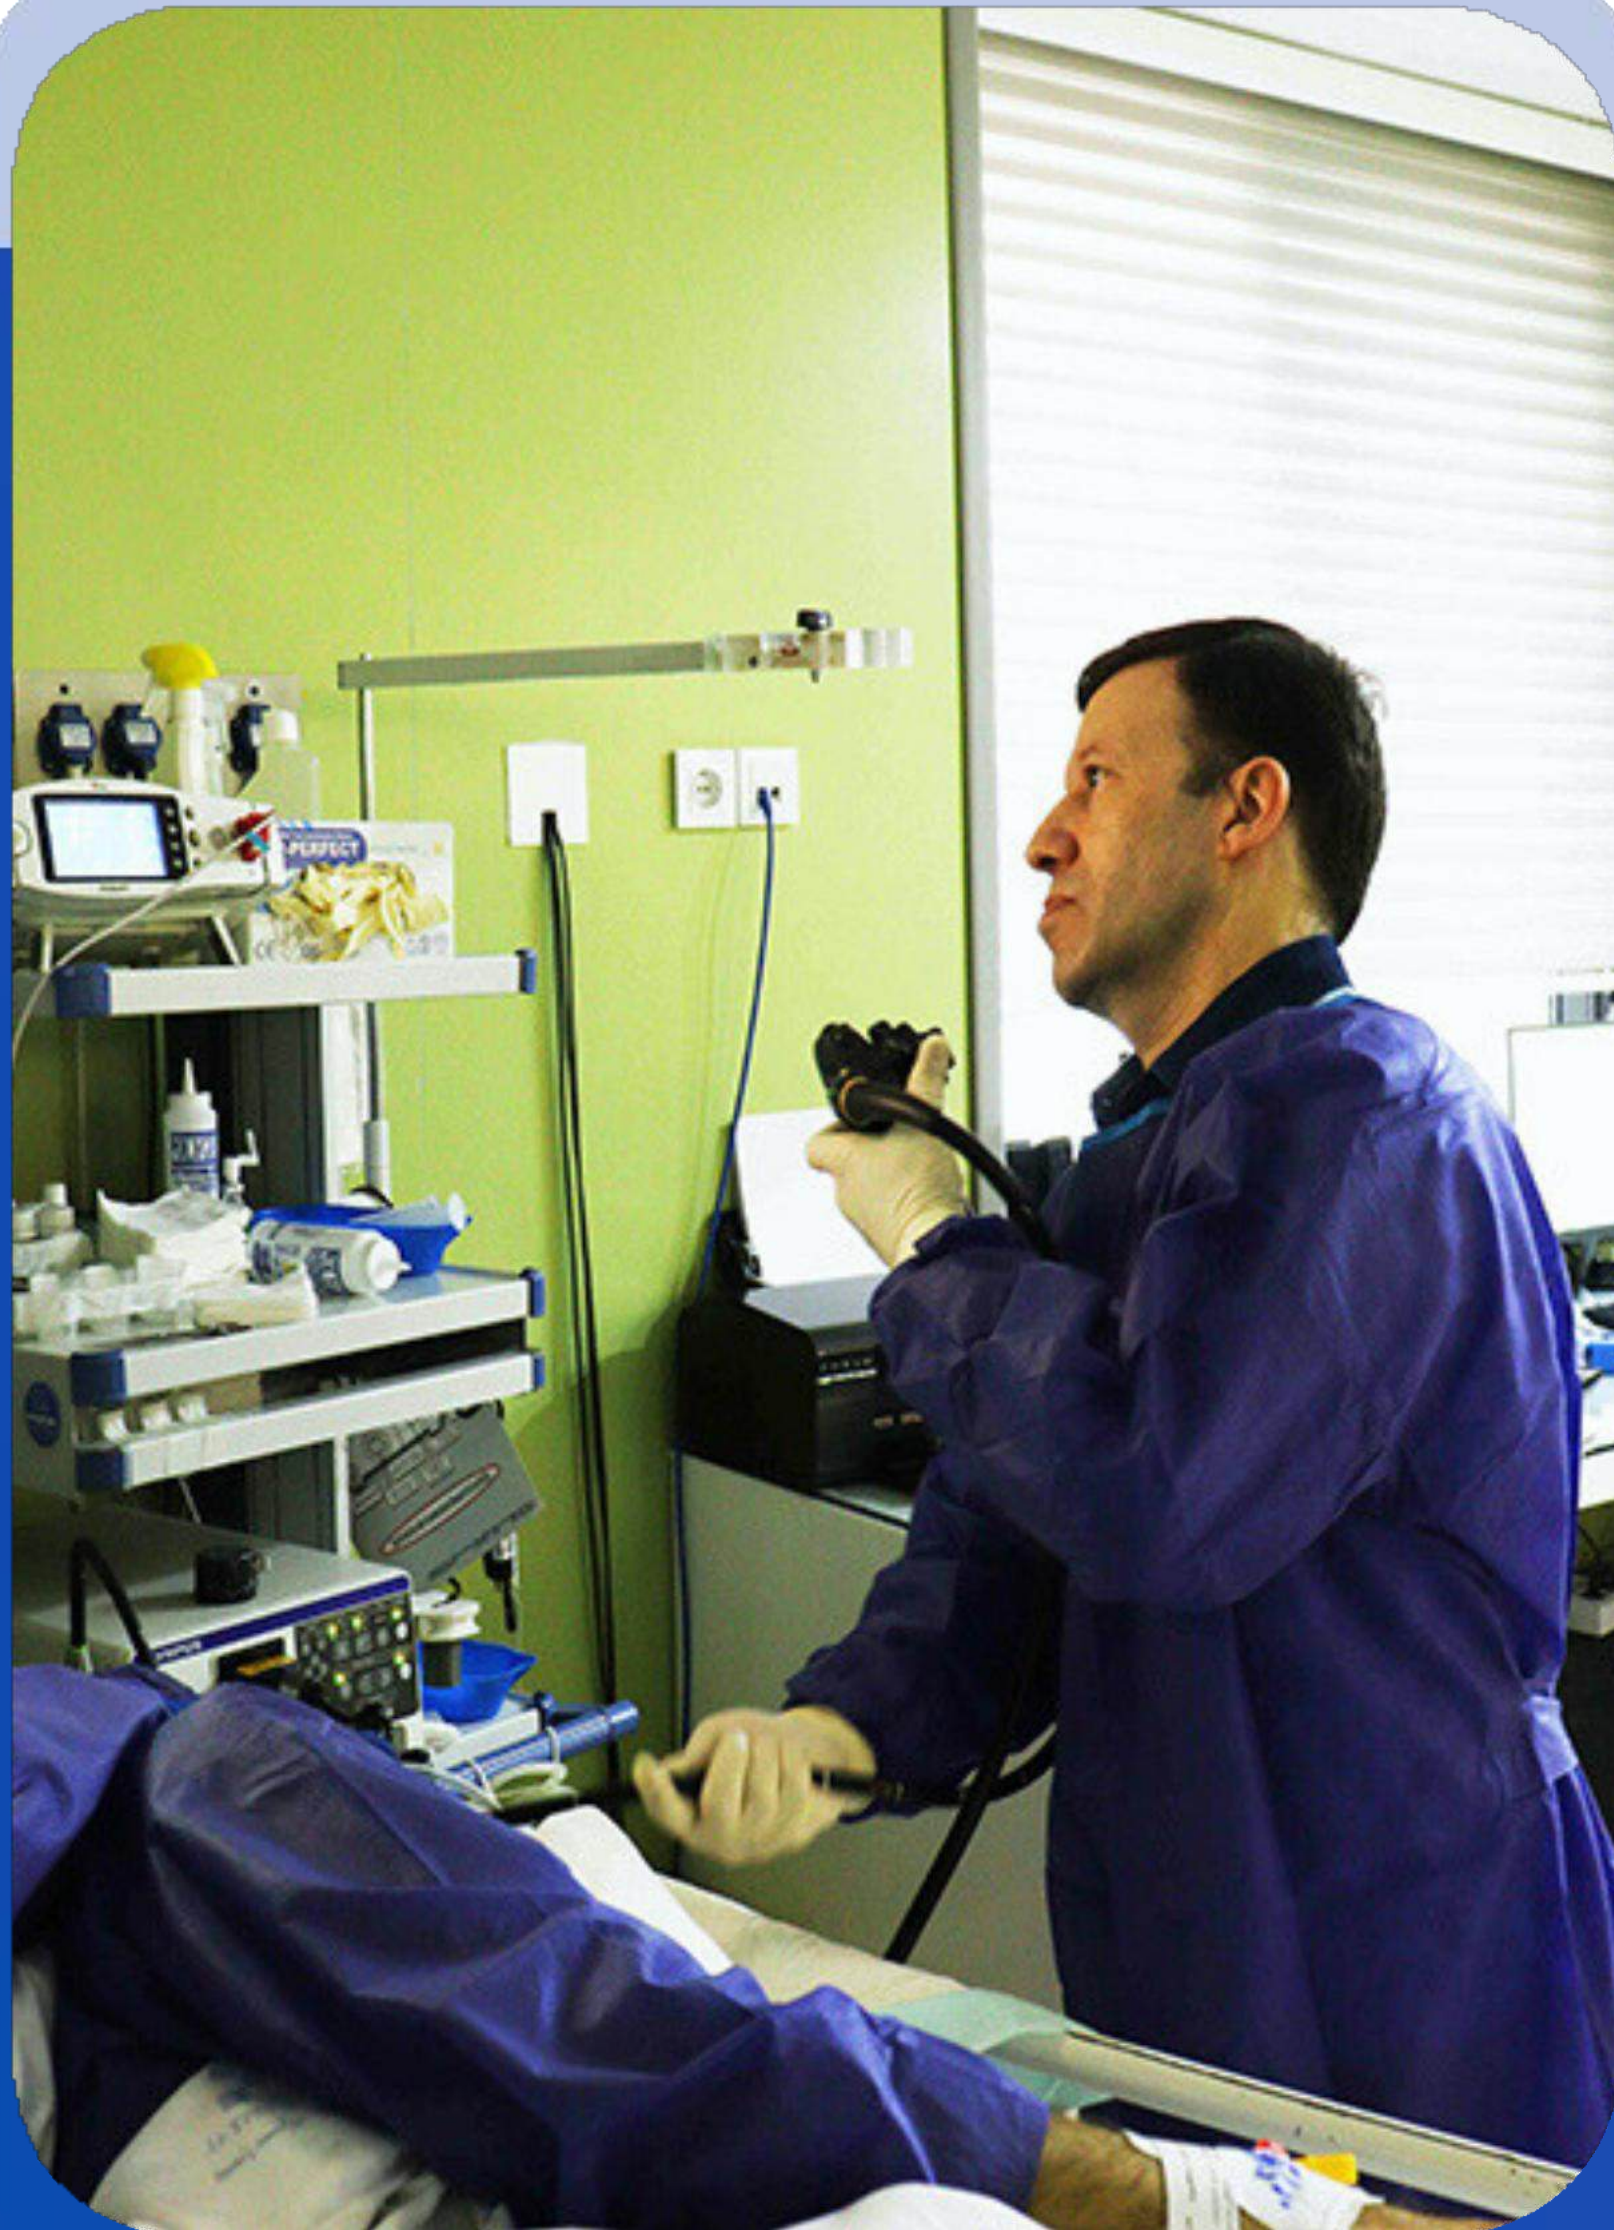

PAINLESS PARTURITION

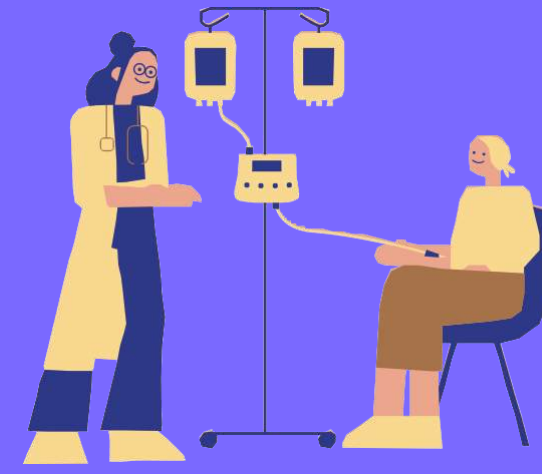

Jam Hospital has been one of the pioneers in providing painless childbirth services. is performed in the delivery rooms and under the supervision of obstetricians and anesthesiologists . In this collection, services such as epidural, the use of inhaled analgesic gases, the use of pain-relief medications with minimal risk to both the mother and baby and other pain management methods are available.

ENDOSCOPY WARD

Our Endoscopy Ward offers advanced diagnostic and therapeutic procedures for patients with digestive disorders. We follow international safety standards, supported by experienced physicians, modern equipment, and multilingual services for international patients . Our Services Diagnostic Endoscopy,Upper GI Endoscopy (Gastroscopy) , Colonoscopy ,Capsule Endoscopy Therapeutic Endoscopy,Polyp removal (Polypectomy),Bleeding control (Hemostasis), Dilation of strictures,ERCP (bile & pancreatic ducts), Stent placement .Our Medical Team: Experienced gastroenterologists , Skilled endoscopy nurses & technicians, Anesthesiologists for safe sedation ,Patient coordinators (English, Arabic, etc.)

DIALYSIS

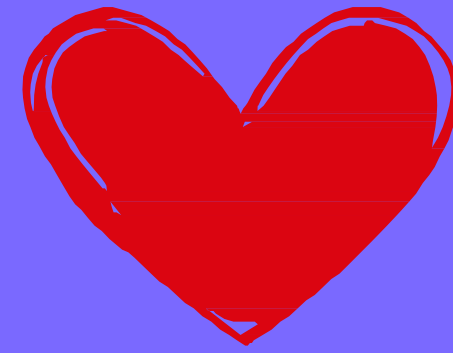

This unit has five active beds and Fresenius 4008B-S dialysis machines and full monitoring during treatment services under the supervision of experienced nephrologists and an experienced dialysis nurses on dialysis provides the necessary services to patients. Activities of this unit can be summarized in removing toxins and excess body fluid to preventing the accumulation of waste products in the body CRF (Patients with chronic renal failure) and ARF (Acute renal failure). If specialized consultation is required, patients are referred by their physician to the appropriate medical specialists within the hospital.

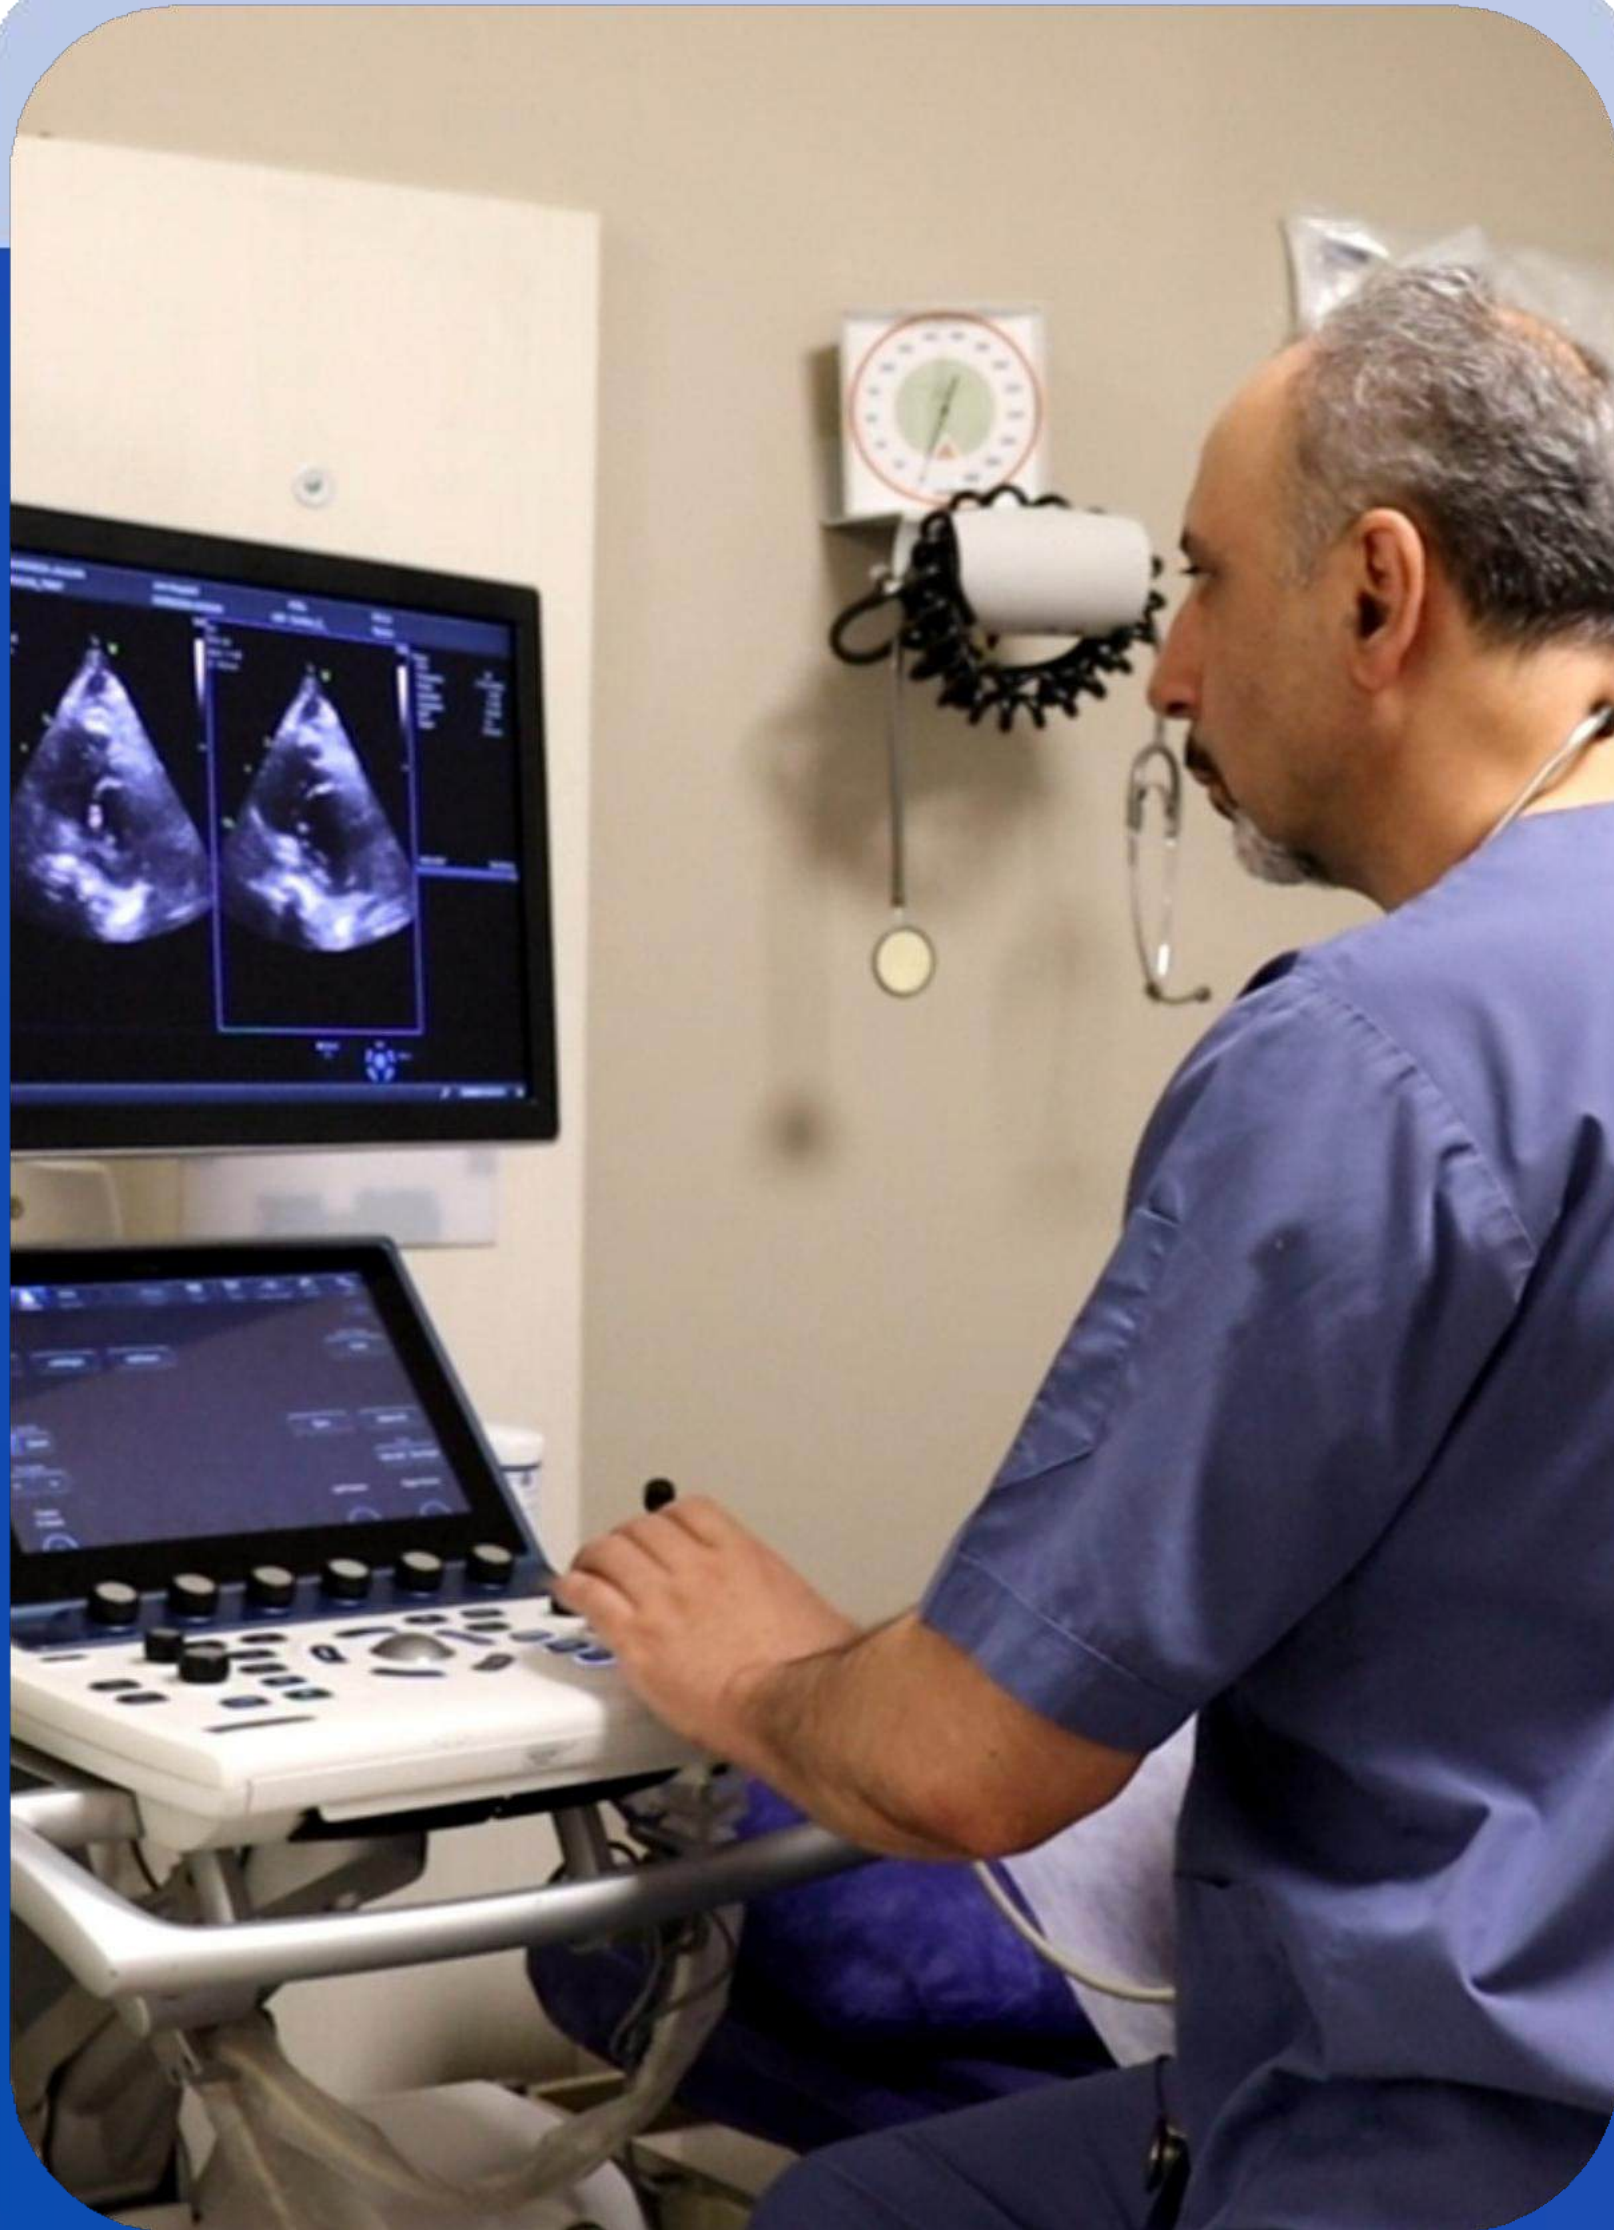

ONCOLOGY (DAY CARE)

Day Care Unit located on the third floor of hospital dedicated to chemotherapy patients under the supervision of oncologists. All patients receiving treatment in this unit undergo chemotherapy by experienced nurses and under the supervision of oncology specialists . If required, post-chemotherapy care is provided in the hospital wards. All required services under the supervision of oncologists are conducted in hospital with coordination of relevant section.

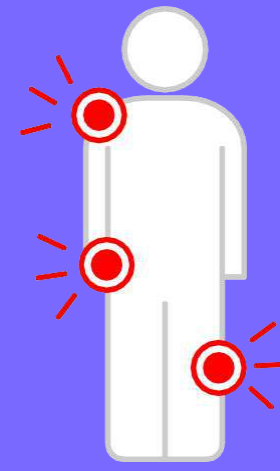

HEART CLINIC EXERCISE TEST, HOLTER MONITORING ECHOCARDIOGRAPHY

Due to the increasing prevalence of cardiovascular disease, especially in modern urban societies Jam Hospital's Heart Clinic by using specialized services and modern equipments and expertise of our cardiologists provides comprehensive care for patients with any degree of heart problems. This center, with a precise and scientific program under continuous medical monitoring and with medical supervision, diet therapy, stress control, and under the supervision of a clinical psychologist and extensive training with regular regular follow-up evaluations, provides comprehensive cardiac rehabilitation services.

Cardiac rehabilitation completes the treatment cycle of heart diseases, which is an effective way to prevent the recurrence of heart disease.

PAIN CLINIC

Diagnosis and treatment of acute and chronic neurological and musculoskeletal pain are provided at this center. by physicians specializing in anesthesiology and pain management who are specially trained in pain management Treatment of back pain, neck pain, spinal deformities, congenital anomalies, various types of arthritis and cancer-related pain and pain following chemotherapy and... are among the conditions treated in this pain management clinic.

SPECIALTY CLINICS

Includces:

- local clinic
- Skin
- Psychiatric
- Orthopedics
- Infants and children
- Oncology
- Neurology
- Neurosurgery
- Cosmetic and Plastic Surgery
- Surgery OB/GYN
- Nephrology
- Ear , nose and throat
- Peripheral vascular(Varices)

LABORATORY

This unit, equipped with well-maintained, advanced, and modern laboratory equipment, provides diagnostic services to both inpatients and outpatients 24 hours a day, 7 days a week. All routine, specialized, and highly specialized tests are performed in the shortest possible time, thanks to the expertise of our physicians and experienced laboratory staff.

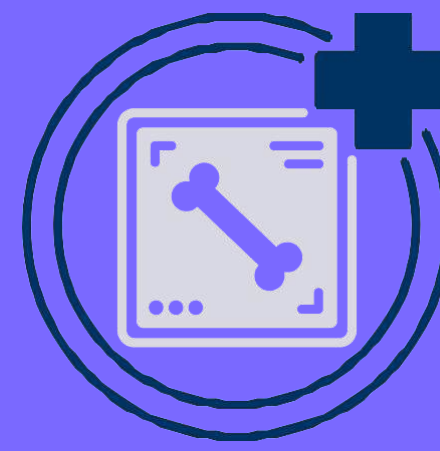

Test results can also be accessed online through the Jam Hospital website.

AUDIOMETRY

The Jam Hospital Audiometry Unit, utilizing modern and advanced facilities for hearing and balance assessment, is capable of performing all essential audiometric and electrophysiological tests . These include comprehensive evaluations for hearing aid fitting, pediatric hearing assessments, and vestibular function testing for balance disorders . The unit also provides specialized diagnostic services such as otoacoustic emissions (OAE), auditory brainstem response (ABR), and videonystagmography (VNG). With state-of-the-art equipment and an expert staff, the center ensures accurate diagnoses and personalized rehabilitation plans for patients with hearing and balance impairments.

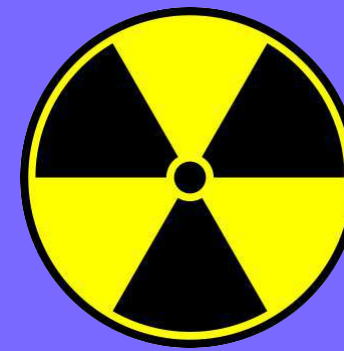

RADIOLOGY

JAM Hospital Medical Imaging Center

- * Multislice CT Scan: Routine CT scans, coronary CT angiography, brain and carotid CT angiography, orthography, and peripheral angiography**
- * Ultrasonography: Abdominopelvic, breast, and thyroid.**
- * Color Doppler Imaging: Carotid arteries, peripheral arteries and veins, abdominal aorta, mesenteric, renal, and hepatic vessels, soft tissue Doppler, and uterine and ovarian Doppler.**
- * Elastography & fibroscan: Mamography**
- * Densitometry**
- * Plain radiography**
- * radiography with oral and IV contrast**
- * Interventional procedures under CT or ultrasound guidance. FNA, CNB of thyroid, breast, liver, kidney, -prostate biopsy under TRUS, Drainage, catheter insertion, nephrostomy, PTCD**

NUCLEAR MEDICINE

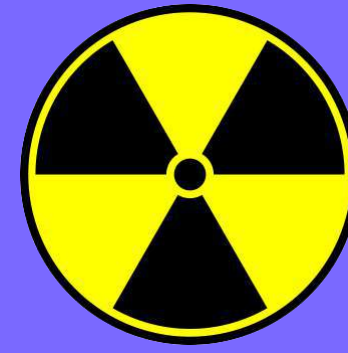

The Nuclear Medicine Center of Jam Hospital, as the oldest private nuclear medicine center in Iran, proudly combines tradition with innovation to deliver outstanding patient care.

Equipped with cutting-edge technology, including the Siemens SPECT-CT and the ADAC SPECT scanner, our center ensures precise diagnostics and effective therapies across a wide range of conditions. With decades of trusted experience, we are committed to offering the highest quality nuclear medicine services and are honored to serve our valued patients with excellence, care, and compassion.

Therapeutic Services:

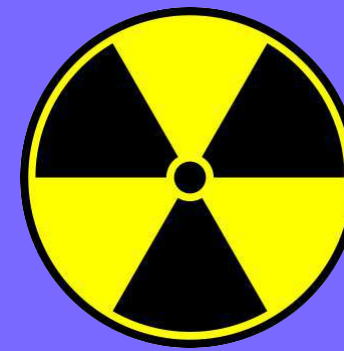

1. Radioiodine Therapy (Outpatient treatment of benign and malignant thyroid diseases)
2. Therapy with Lutetium-Dotatate (^{177}Lu -Dotatate)
3. Therapy with Lutetium-PSMA (^{177}Lu -PSMA)

NUCLEAR MEDICINE

- 4. Therapy with Radiopharmaceuticals Samarium, Rhenium, and Lutetium ($^{153}\text{Sm-EDTMP}$ / $^{188}\text{Re-HEDP}$ / $^{177}\text{Lu-EDTMP}$) for palliative treatment of bone metastases
 - 5. Radiosynovectomy (Radiation Synovectomy) — intra-articular injection of radiopharmaceuticals for treatment of inflammatory joint diseases
- Diagnostic services:**
- 1. Cardiac Perfusion Scan (MIBI/Thallium) for evaluation of ischemia, infarction, and viability
 - 2. Resting Cardiac Scan for evaluation of viability, wall motion, and wall thickening
 - 3. Cardiac Pyrophosphate (PYP) Scan for evaluation of cardiac amyloidosis
 - 4. Whole Body Bone Scan (MDP)
 - 5. Parathyroid Scan with SPECT-CT
 - 6. Thyroid Scan and Thyroid Uptake (Tc-99m)
 - 7. Lung Perfusion and Ventilation Scan (V/Q Scan) for evaluation of pulmonary embolism and quantitative preoperative assessment

NUCLEAR MEDICINE

8. Dynamic Renal Scan (DTPA / EC) for evaluation of obstruction and renal function
9. Static Renal Scan (DMSA) for evaluation of renal parenchyma and cortical scarring
10. Captopril Renal Scan for evaluation of hypertension due to renal artery stenosis
11. Renal Transplant Scan for evaluation of ATN, transplant function, and rejection
12. Direct Radionuclide Cystography (DRNC) for evaluation of vesicoureteral reflux
13. Brain Perfusion SPECT (SPECT-CT) for evaluation of dementias, brain tumors, and temporal lobe epilepsy
14. Labeled RBC Scan for evaluation of hepatic hemangioma and gastrointestinal bleeding
15. Hepatobiliary Scan (HIDA)
16. Liver and Spleen Scan
17. Gastric Emptying Study
18. Meckel's Diverticulum Scan
19. Breast Lymphoscintigraphy for evaluation of sentinel lymph node
20. Limb Lymphoscintigraphy – Upper & Lower Limbs for evaluation of lymphedema and sentinel node
21. Salivary Gland Scan
22. Somatostatin Receptor Scintigraphy (Octreotide Scan) for evaluation of neuroendocrine tumors
23. Whole Body I-131 Scan for evaluation of thyroid cancer
24. Dacryoscintigraphy for evaluation of lacrimal duct obstruction
25. Infection Imaging with Tc-99m UBI for evaluation of infection
26. PSMA Scan for evaluation of prostate cancer
27. Testicular Scan

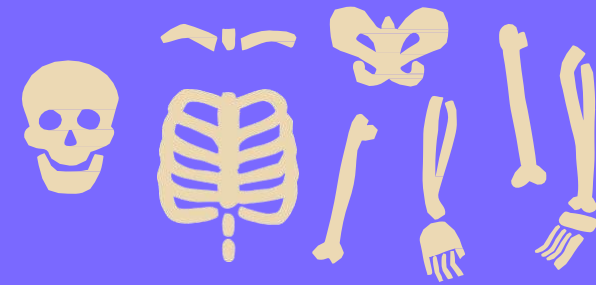

MSCT

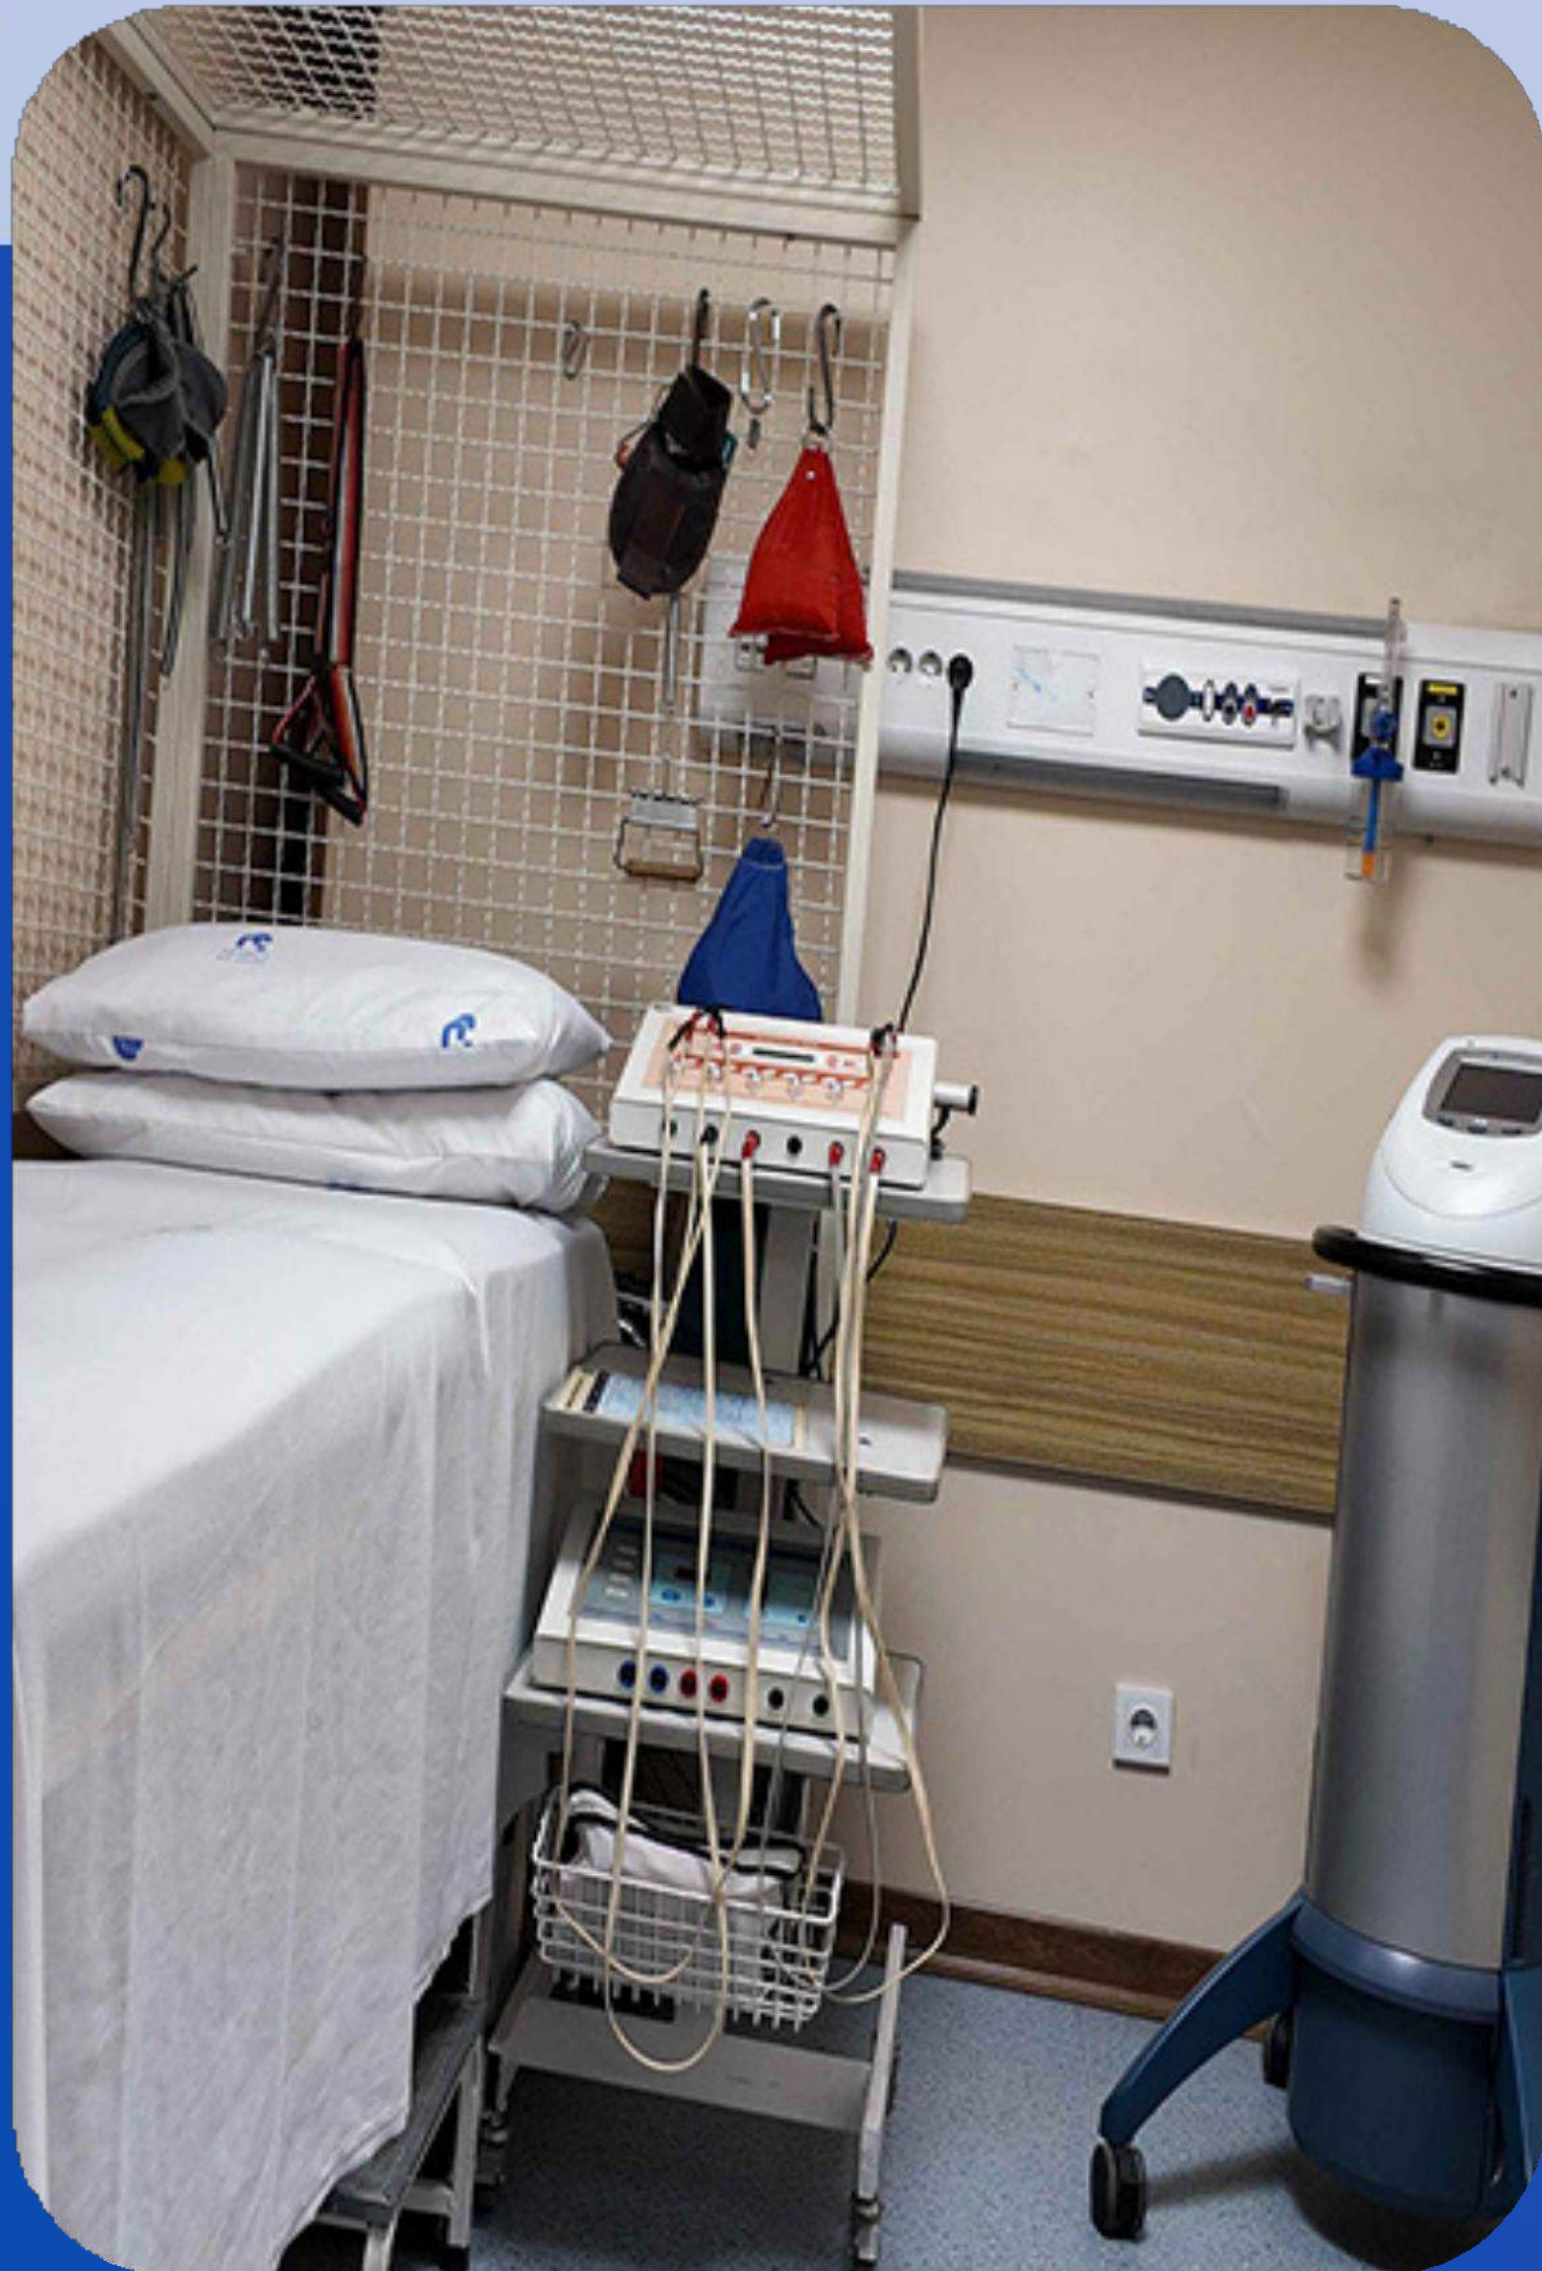

Jam Hospital's MSCT Center is equipped with an advanced Multislice CT scanner (Somatom go.Top). Using high-powered tubes and multi gantries and high speed detectors results in higher definition images and thus, helps making more accurate detections. Also, Somatom go.Top allows covering broader imaging areas through a single raying, and reduces the loss of binding data. Jam Hospital's MSCT Center, utilizing advanced and proficient doctors is one of the best MSCT centers in the region.

SPECIAL CLINIC OF PHYSICAL MEDICINE AND REHABILITATION

This clinic is located on the ground floor of the adjacent building and provides services for both inpatients and outpatients. Orthopedic issues, musculoskeletal injuries, spinal cord injuries, sports injuries and other conditions are among the broad range of treatments this clinic has to offer .

Electromyography (EMG) machines, hot packs and infrared (HP-IR), ultrasound (US), physiotherapy (exercises), laser therapy, electrotherapy (ES s TENS), spinal traction, vacuum therapy, interferential (IF) therapy, shockwave therapy (SWT), and other rehabilitation equipment are available in this department.

- Patients are admitted 24 hours a day, 7 days a week.
- Valid passports or government-issued identification cards are required for patient admission.
- For the comfort of patients' companions, we can make arrangements for their stay at hotels close to the hospital.
- We can make arrangements for patient companions to travel between the hospital and the hotel.
- We can make arrangements with tour operators to organize sightseeing tours of Tehran.
- We can make arrangements with authorized foreign exchange dealers regarding the foreign currency needs of patients and their companions.
- We can make arrangements and introduce you to travel agencies to assist with visa applications and airline ticket purchases.

PATIENTS GUIDE

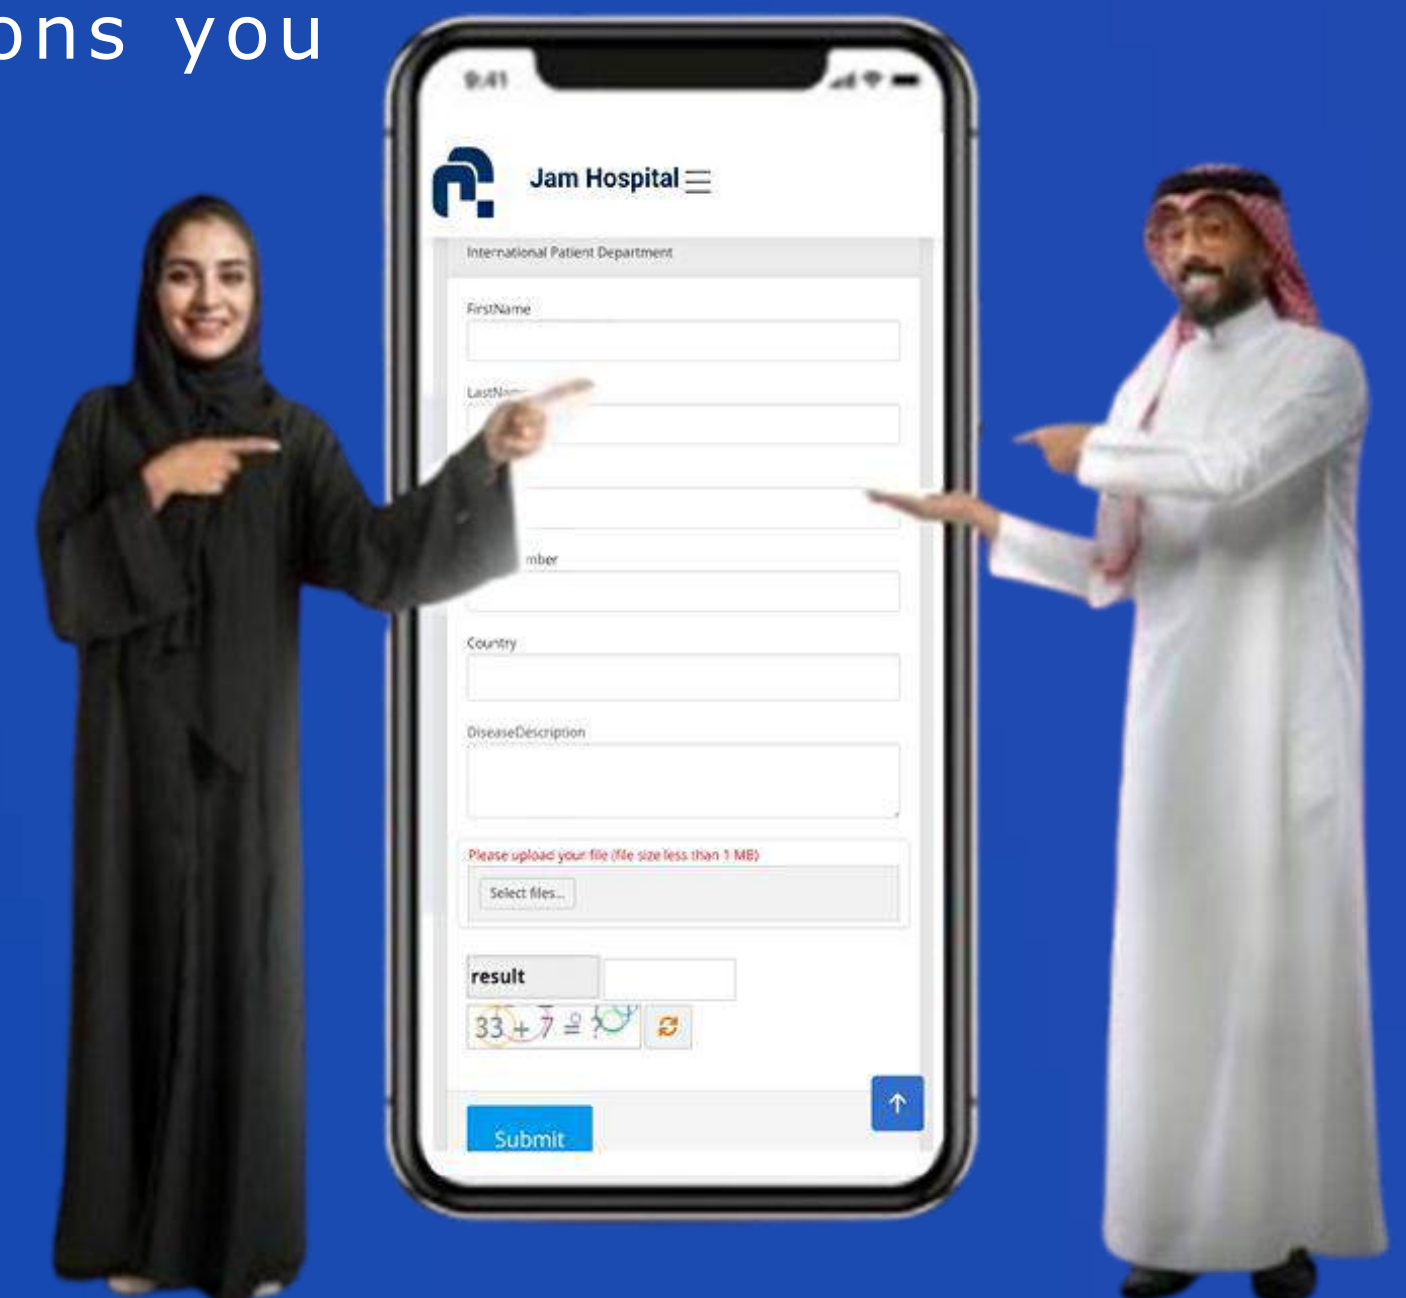

Please read the following information carefully for your comfort and easy access to hospital facilities.

- We can make arrangements for a translator to be present at the patient's bedside and accompany the patient's companions.
- Please contact extension 429 if you would like to use the hospital's Internet services.
- Please contact extension 524 to receive hospital cafeteria services for your guests.
- You will receive food menus in Persian, Arabic and English every day.
- To follow up on the services mentioned above and ensure your comfort, please contact extension +G8 21 84140137 to speak with the responsible specialist, who will be happy to answer any questions you may have.

BOOK NOW

WELFARE FACILITIES

Jam Hospital welfare facilities for patients, their companions, and staff benefit from careful planning and well-established, continuously updated regulations.

These facilities include: Wi-Fi internet access, welcome nursing services (to introduce and guide patients and companions), prayer kits for bedridden patients in their rooms, the ability to make internal and external phone calls from the rooms, separate prayer rooms for men and women, meal menus for patients and their companions, religious amenities, online access to test results without the need for an in-person visit, in-room coffee shop services, ATMs, CRM services (regarding customer welfare), and hygiene kits containing essential items for bedridden patients.

A background graphic consisting of a grid of approximately 100 circular portraits of medical professionals, mostly men in white coats, arranged in a staggered pattern. The portraits are semi-transparent and set against a dark blue background. In the top right corner, there is a decorative pattern of yellow dots.
